CONTENTS OF QUALITY ASSURANCE

ASSURANCE METHOD CONTENTS

Performance

Unless otherwise specified, the capacitors shall be measured at +15°C to +35°C , 45to75%RH. However, if any doubt arises on the judgment, the measurement conditions shall be +20±1°C , 60to70%RH the test Conditions shall comply with IEC-60384-4.

1. Capacitance(CAP.)

Measuring frequency	:120Hz±20%
Measuring voltage	:0.5V rms. +1.5 to 2.0V dc
Measuring circuit	:Series equivalent circuit.

Criteria: Shall be within the specified capacitance tolerance.

2. Dissipation Factor (tanδ)

Measuring frequency	:120Hz±20%
Measuring voltage	:0.5V rms. +1.5 to 2.0V dc
Measuring circuit	:Series equivalent circuit.

Criteria: Shall not exceed the specified in the table of Ratings.

3. Leakage Current (L.C.)

DC leakage current shall be measure with rate voltage, which is applied through a resistor of $1,000\pm10\Omega$ connected in series with the capacitors , at the end of a specified period after the capacitors reached the rated voltage across the terminals.

Criteria: Shall not exceed the specified in the table of Ratings.

4. Surge Voltage

4.1 The surge DC rating is the maximum voltage to which the capacitor should be subjected under any conditions. This includes transients and peak ripple at the highest line voltage.

4.2 Capacitors, connected in series with 1000 ohm resistors, shall withstand the surge test voltage applied at the rated of 1/2 minute on, 4 1/2 minutes off, for 1000 successive test cycles at 20°C (see the following table)

Rated Voltage (WV)	6.3	10	16	25	35	50	63
Surge Voltage (SV)	10	13	20	32	44	63	79

Rated Voltage (WV)	100	160	200	250	350	400	450
Surge Voltage (SV)	125	200	250	300	400	450	500

Criteria:

Capacitance change	: $\leq \pm 15\%$ of initial value
Dissipation Factor	:within specified value
Leakage Current	:within specified value
Physical	:no broken and undamaged

Endurance characteristic

5. High temperature load life test

Condition	Specification	
1. Capacitors shall be placed in oven with application of ripple current and rate voltage for 2000 ± 12 hrs at 105°C	Capacitance change	Within $\pm 20\%$ of the initial value
2. The capacitors should be use within specified permissible ripple current in each standard products table(the sum of DC working voltage and AC peak voltage shall be equal to the rated DC working voltage	TANδ	Less than 200% of specified value
3. The specified maximum permissible ripple current in defined at 105°C and 120 Hz	Leakage Current	Within specified value
4. Then the capacitor shall be subjected to standard atmospheric conditions for 16 hours, after which measurements shall be made.	Physical	no broken and undamaged

6. High temperature shelf life test

After 1000-2000hrs test at 105°C without rated working voltage. And then the capacitor shall be subjected to standard atmospheric conditions for 16 hours, after which measurements shall be made.	Capacitance change	Within $\pm 20\%$ of the initial value
	TAN δ	Less than 200% of specified value
	Leakage Current	Less than 200% of specified value
	Physical	no broken and undamaged

7. Rotational temperature test

Capacitor is placed in an oven whose temperature follows specific regulation to change. The specific regulations are "+25°C (1 hr) → +105°C (2 hrs) → +25°C (0.5 hr) → -40°C (2 hrs) → +25°C (0.5 hr)", and it is called a cycle. The test totals 10 cycles. And then the capacitor shall be subjected to standard atmospheric conditions for 16 hours, after which measurements shall be made.	Capacitance change	Within $\pm 10\%$ of the initial value
	TAN δ	Within specified value
	Leakage Current	Within specified value
	Physical	no broken and undamaged

8. Humidity test

Capacitors shall be exposed for 500±8hrs in an atmosphere of 90~95%RH at 40°C. And then the capacitor shall be subjected to standard atmospheric conditions for 16 hours, after which measurements shall be made.	Capacitance change	Within $\pm 10\%$ of the initial value
	TAN δ	Less than 120% of specified value
	Leakage Current	Within specified value
	Physical	no broken and undamaged

9. Low temperature test

Capacitors are placed at -40±3°C for 72±4hrs. And then the capacitor shall be subjected to standard atmospheric conditions for 16 hours, after which measurements shall be made.	Capacitance change	Within $\pm 10\%$ of the initial value
	TAN δ	Within specified value
	Leakage Current	Within specified value
	Physical	no broken and undamaged

10. Vibration test

1. Fix it at the point 4mm or less from the body. For ones of 12.5mm or 25mm or more length, use separate fixture. 2. Direction and duration of vibration: 3 orthogonal directions each for 2hrs total 6hrs. 3. Mutual frequency: 10 to 55Hz reciprocation for 1 min. 4. Total amplitude: 1.5mm	Capacitance change	Within $\pm 10\%$ of the initial value
	TAN δ	Within specified value
	Leakage Current	Within specified value
	Physical	no broken and undamaged

11. Reflow test

<p>1. IR Reflow</p> <table border="1"> <tr> <td rowspan="2">Preheat</td><td>Temp (T1~T2)</td><td>100~150°C</td></tr> <tr> <td>Time (t1) max</td><td>40 sec</td></tr> <tr> <td rowspan="2">Duration</td><td>Temp(T3)</td><td>260°C</td></tr> <tr> <td>Time (t2) max</td><td>10 sec</td></tr> <tr> <td rowspan="2">Peck</td><td>Temp(T4)</td><td>270°C</td></tr> <tr> <td>Time (t3) max</td><td>5 sec</td></tr> <tr> <td>Reflow cycle</td><td colspan="2">Twice or less</td></tr> </table> <p>2. Solder bath method: Solder temperature: 260±3°C</p>	Preheat	Temp (T1~T2)	100~150°C	Time (t1) max	40 sec	Duration	Temp(T3)	260°C	Time (t2) max	10 sec	Peck	Temp(T4)	270°C	Time (t3) max	5 sec	Reflow cycle	Twice or less		Capacitance change	Within $\pm 10\%$ of the initial value
Preheat		Temp (T1~T2)	100~150°C																	
	Time (t1) max	40 sec																		
Duration	Temp(T3)	260°C																		
	Time (t2) max	10 sec																		
Peck	Temp(T4)	270°C																		
	Time (t3) max	5 sec																		
Reflow cycle	Twice or less																			
TAN δ	Within specified value																			
Leakage Current	Within specified value																			

Immersion time:5+1/-0 sec Thickness of heat shunt (Printed wiring board):1.6mm 3. Soldering iron method: Bit temperature: 350±10°C Application time of soldering Iron:3+1/-0 sec	Physical	no broken and undamaged
---	----------	-------------------------

12. Solderability test

After the lead wire fully immersed in the solder for 2 ± 0.1 sec at a temperature of $245\pm2^\circ\text{C}$, the solder coating must be more than 95%

13. Mechanical

1. The test is about lead tabs strength.
2. Tension test:

The lead tabs shall not be broken or any malformed condition after fixing capacitor vertically and pressing the following weight on the lead tabs of capacitor for 10 ± 1 sec.

Lead tabs diameter(mm)	Weight(Kg)
≤ 0.5	0.5
0.6~0.8	1.0
>0.8	2.5

3. Bending test:

capacitor is held in vertical position. Attach a weight to the lead tabs, slowly rotate the capacitor 90° to a same way in the opposite direction. Repeat it again (5 secs per cycle). The lead tabs shall not be broken or cracked.

Lead tabs diameter(mm)	Weight(Kg)
≤ 0.5	0.5
0.6~0.8	1.0
>0.8	2.5

14. Safety vent

Condition: Apply a reverse voltage with current 1 amp.(DC reverse voltage test)

Criteria: When the pressure relief vent operated, the capacitor shall not flame although gas generation or expulsion of a part of the inside element is allowable. If the vent does not operate with the voltage applied for 30 minutes, the test is Considered to be passed.

15. Standards

Satisfies Characteristic W of IEC-60384-4,18
