Call indicator with buzzer

GENERAL INFORMATION

The Adroit Toilet Emergency Alarm Kit is designed to meet the Singapore Build and Construction Authority (BCA's) emergency call bell system requirements.

It consists of an over-door large LED signal light call indicator with built-in sounder. Available as push button and or pull cord call station with built-in reset button. Both versions are water-resistant .

All devices are BS standard one gang faceplate and can be installed with a standard back box. The system requires UTP Cat5 or Cat6 cable which can be separately purchased from our company.

The emergency alarm can be remotely routed to the Fault Report Centre (FRC) by installing an optional 6-channel call indicator with sounder. The 230v 50/60Hz step-down voltage converter ensures that the system operates safely in a damp/wet environment. A UPS battery back-up can be added for uninterrupted power supply.

The standard models are available as follows:

AD-HTEM3A Consisting of a Call indicator, push button station, 13A plug top step-down power adaptor and operation & installation guide.

AD-HTEM3C Similar to the AD-HTEM3A above. In addition, a dry contact for remote alarm.

AD-HTEM3B Consisting of a Call indicator, pull cord station, 13A plug top step-down power adaptor and operation & installation guide.

AD-HTEM3D Similar to the AD-HTEM3B above. In addition, a dry contact for remote alarm.
