

ESD Flux Dispenser with Pen Tip **multicomp**PRO

RoHS
Compliant

Description

These molded polyethylene bottles utilise a concentrate that does not contain any Ethoxylated Tertiary Amine, which is widely used as an antistatic agent. These ESD safe bottles have an average surface resistivity of 10^9 to $10^{10}\Omega/\text{square}$ and do not have any less desirable features associated with surfactant laden material.

These bottles will dissipate a static charge of +5000V in less than 2 seconds at 40% relative humidity. By their chemical nature, they will not have any chemical reactivity with solvents as TCE or alcohol. The pH of the deionised water solutions tested were the same before and after a seven day period. No colour or physical change was noted for any solvents tested.

Part Number Table

Description	Part Number
ESD Flux Dispenser with Pen Tip	146-0017
