## **Soldering Profile**

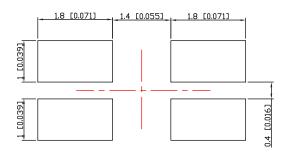

Reflow Soldering Profile For Lead-free SMT Process.

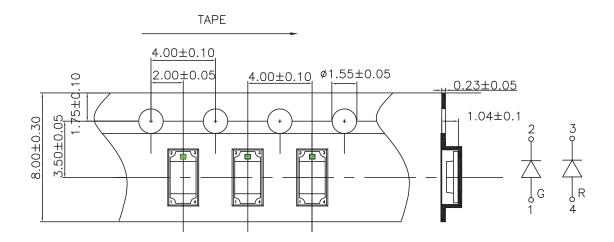

### Notes

- 1. We recommend the reflow temperature 245°C. ( $\pm 5^{\circ}$ C) The maximum soldering temperature should be limited to 260°C.
- 2. Don't cause stress to epoxy resin while it is exposed to high temperature.
- 3. Number of reflow process shall be 2 times or less.

### **Storage**

- Storage condition before opening the package: 5°C to 30°C, the largest percentage relative humidity is 60% and the storage period is one month. The LEDs beyond the storage period just can be used after dealing as step 4.
- After opening the package, If the LEDs will be Infrared reflow soldering, Oxygen phase reflow soldering or any other welding.
  - a. must be welding within 24 hours.
  - b. the storage humidity must be below 30%.
- · If the situation does not satisfy 2a or 2b, the LEDs must be roasted.
- If the LEDs need to be roasted, the roast temperature should be 60°C+/-3 and the roast timeshould be 48 hours.

### **ESD (Electrostatic Discharge)**

Static Electricity or power surge will damage the LED.

The following procedures may decrease the possibility of ESD damage.

- All production machinery and test instruments must be electrically grounded.
- Use a conductive wrist band or anti-electrostatic glove when handling these LEDs.
- · Maintain a humidity level of 50% or higher in production areas.
- Use anti-static packaging for transport and storage.

### Cleaning

- Led should be cleaned in a normal temperature and the time for cleaning should be less than 3 minutes; please use
  Alcohol as cleaner ,before you use other cleaning solvent ,please make sure that the cleaner will not make any damage to
  the LED performance or the appearance .
- Ultrasonic Cleaning is also commonly used for cleaning LED, please verify the Ultrasonic cleaning's Power and time to
  avoid any damage to the LED.
