Green Premium™

Enhance sustainability with Altivar™ Process drives

Superior environmental performance thanks to upgradability and modernization solutions.

Altivar Process is **RoHS** and **REACH** compliant

- Transparent environment information
- Life Cycle Analysis, compliant with ISO14025
- Circular instructions

Altivar Process drives brings key benefits to our end users in achieving **superior sustainable performance** by enhancing its functionality, performance of capacity, for both, hardware and software.

The **additional hardware options** and the **firmware upgradability** capabilities of the Altivar process help our customers to maximize the process continuity and operation, as well as reducing the operational expenses, by avoiding the change of their drive or the modification of the existing installation, as a retrofit.

Benefits

- Maximize **process continuity and operation**
- Reduce your **OPEX**
- Easy **scalability** of your Automation system
- **Future-ready** solution for **Industry 4.0**
- Improve **power quality** of your system with a low investment
- Improve the **safety, integration, and performance** of your application
- Optimize your **maintenance cost** and the **Drives Lifetime**

Communication & Wi Fi Modules

The additional communication modules allow our customers to easily integrate Altivar Process drives in their scalable Automation system. Together with the Wi Fi access point, brings easy access to the real data provided by the drive, helping the digitalization and the easy integration of the drive in the Industry 4.0 technologies.

Passive Filters*

The optional passive filter of the Altivar Process brings to customers the possibility to improve their installation's power quality by reducing the harmonics levels, even keeping their existing drives installed.

Additional I/O & Safety modules*

The additional I/O and the safety modules help our customers to extend the performance and integration of their application, enhancing at the same time the operators' and machines' safeness.

Firmware Update & Service expertise

Thanks to our global network of service experts, our customers have the possibility of upgrading the Drive's firmware and modernizing its hardware to extend the Drives lifetime.

Experience the difference today at

se.com/green-premium

* For more information regarding the compatibility of these options, please visit us in se.com/drives

Schneider Electric's IoT-enabled, plug-and-play, open, secure, interoperable architecture and platform, in Industries, Infrastructures, Data Centers, and Buildings.

Innovation at every level

EcoStruxure is based on a three-tiered technology stack delivering innovation at every level, from connected products to edge control and apps, analytics, and services.

Together with our hybrid segments approach, this enhances your value around safety, reliability, operational efficiency, sustainability, and connectivity across 6 domains of expertise:

- Power
- IT
- Building
- Machine
- Plant
- Grid

Dedicated architectures and IoT

We tailor our solutions in the form of dedicated reference architectures for plants:

- Management systems
- Power systems
- Data center systems
- Industrial plant and machine systems
- Smart grid systems

The Industrial Internet of Things (IIoT) gives an additional boost to technologies. That's why we provide our customers with an IoT-enabled architecture and platform offering simple, reliable, productive, and cost-efficient solutions.

Cybersecurity solutions

Robust cybersecurity protection is a must, and Schneider Electric's solutions can deliver it, regardless of business type or industry.

The vendor-agnostic services provided by our skilled professionals help to protect your entire critical infrastructure. We help to assess your risk, implement cyber-specific solutions, and maintain your onsite defenses over time, while integrating appropriate IT policies and requirements.

This is our difference and your advantage.

Enhanced safety

With the release of M580 Safety, Schneider Electric further expands the EcoStruxure platform.

This consolidates our position as one of the most trusted industrial safety vendor, with thousands of Modicon and Triconex safety systems protecting the most critical industrial processes globally.

EcoStruxure™ for Industry
Innovation At Every Level

*The Schneider Electric industrial software business and AVEVA have merged to trade as AVEVA Group plc, a UK listed company. The Schneider Electric and Life is On trademarks are owned by Schneider Electric and are being licensed to AVEVA by Schneider Electric.

Altivar Process

Provides the efficiency you deserve

Altivar Process is the new comprehensive range of variable speed drives from Schneider Electric, covering the majority of industrial applications with two series:

- > ATV600: drives focused on fluid management and processing and energy saving
- > ATV900: drives focused on maximum productivity with exceptional motor control and connectivity

Depending on customer requirements, Altivar Process drives are available as wall-mounting, floor-standing, and optimized solutions for integration in cabinets.

Altivar Process range

Torque Vs Speed display

Process efficiency

Motor performance and connectivity

- > Excellent motor performance on any type of motor
- > Ethernet dual port offers maximum services such as connection to the control room and process transparency
- > Network service helps ensure operation continuity even in case of connection breakdown
- > Web server and data logging help reduce downtime through fast troubleshooting and preventive maintenance

Complete control of your applications

- > Maximize your application performance by using drive-to-drive communication: total control of any kind of coupling in master/slave applications
- > Total management and flexibility of speed and torque on rigid and elastic coupling
- > Asset monitoring functions to increase production and reduce downtime

Altivar Efficiency Calculator

This tool calculates the level of energy efficiency of your variable speed drive according to the Ecodesign standard EN/IEC 61800-9-2.

- > **Drive Efficiency (CDM Complete Drive Module)**
Drive performance is determined according to 8 operating points considering torque and speed
- > **System Efficiency (PDS Power Drive System)**
System performance is determined according to 8 operating points considering torque and speed. This includes the efficiency of the variable speed drive and its motor.

Calculate your level of energy efficiency with the Altivar Efficiency Calculator

+ Motor control application performance

Configure your Altivar drive with the EcoStruxure™ Motor Control Configurator

EtherNet/IP
ODVA organization: Supports network technologies based on EtherNet/IP

FDT Technology: A widely-accepted international standard in the automation industry

Achilles™ Level 2 certified

Scanning the QR code from a smartphone or tablet

Instant access to online help

Real-time intelligence

Web server and services via Ethernet

- > Embedded Web server interface based on the Ethernet network gives you process monitoring with your daily working tools.
- > Local and remote access to energy use and customized dashboards means your energy is visible anywhere, any time, on PC, tablet, or smartphone.

User-friendliness

Simple integration in PLC environments

- > Easy integration thanks to standardized FDT/DTM and ODVA technology
- > Supported by predefined EcoStruxure Control Expert libraries
- > Easy access via PC, tablet, or smartphone
- > Robust connection via Ethernet

Sophisticated service concept

- > Modular design provides easy spare parts logistics
- > Optimized maintenance costs due to dynamic maintenance schedule, with integrated monitoring of individual components
- > Simple exchange of power modules and fans
- > Quick assistance with dynamic QR codes and Customer Care App

Green product

Designed to have a smaller carbon footprint

- > The Green Premium product label, Schneider Electric's eco-mark, indicates your compliance with international environmental standards such as:
 - RoHS according to European Directive 2011/65 and the delegated Directive (EU) 2015/863
 - REACH according to EU regulation 1907/2006
 - IEC 62635: The end-of-life instructions comply with the latest recycling rules, up to 85% of the product components can be recycled.

Adaptive Cascade Vector Control

Altivar™

Adaptive Cascade Vector Control

New Motor Control method

ACVC provides better **torque accuracy** and **dynamic response**, it improves dynamic trajectory following and power consumption efficiency.

It enables:

- Improvement of torque limitation
- Precise torque control
- Smooth torque output
- Stable torque performance
- Faster the steady state, regardless the load
- Great torque performance in high speed
- Wider Speed/torque operation range

ACVC is improving all kinds of asynchronous motor applications

3 steps for improvements

New algorithm enhancing the torque control

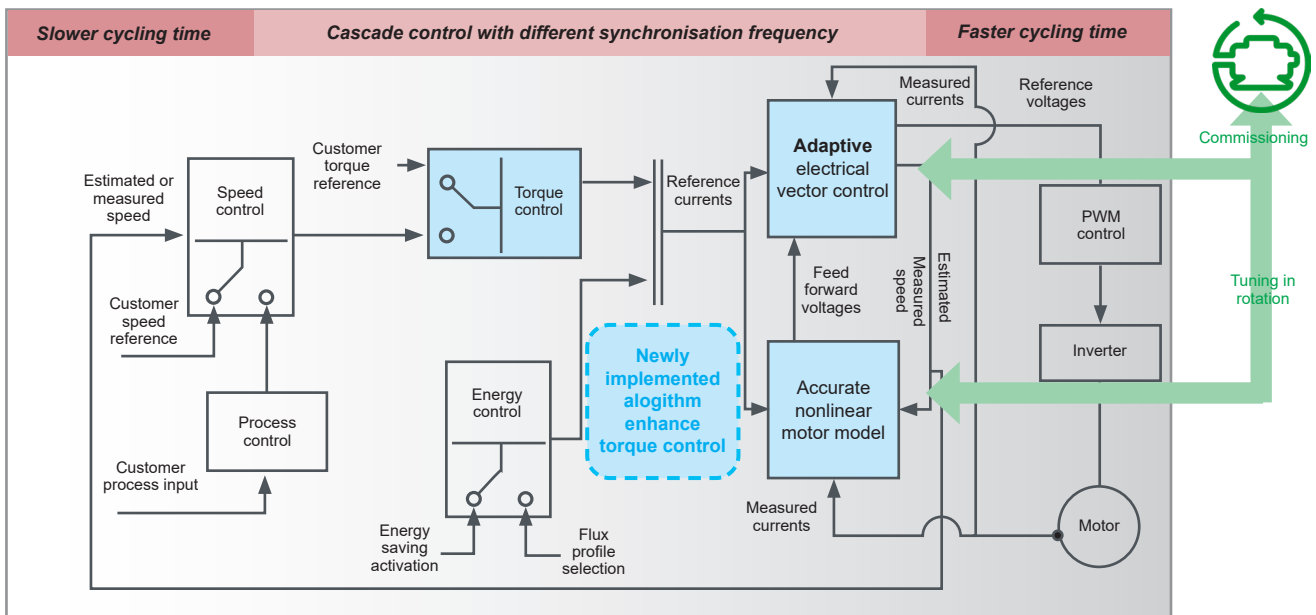

Mathematical improvement on torque control, motor fluxing and motor nonlinear model (including magnetic saturation).

Tune in Rotation by User commissioning

Enhance electrical control on field weakening and inductance online adaptation.

Cascade control by separated time scales

Different sampling time, optimizing the output performance and access better inductance in function of the rotor flux.

*Control mechanism with patent involved.

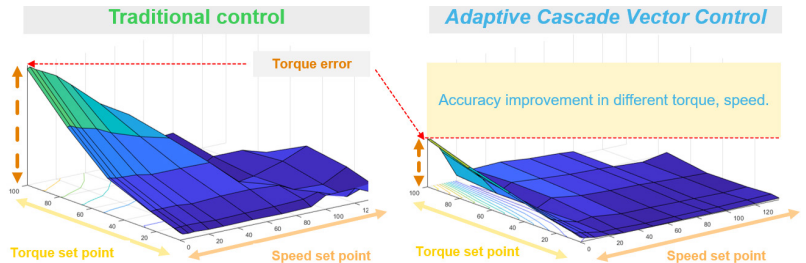

Graphic display shows the improvement by Torque & Speed curve

Customer values

Torque accuracy

Up to 0.5% of nominal torque error rate and improve 25 percentage points accuracy versus traditional control methods.

Reduce overall CAPEX and Material Cost :

- Improve manufacturing quality by ~ 5% on final products
- Reduce loss of raw material by ~5% during production
- Reduce installation cost by ~10% by decreasing the amount of additional torque sensor or additional controllers

Reduce overall OPEX and potential Maintenance :

- Less mechanical vibration damage on machines by smooth control and controllable response behavior
- Gain more energy saving by stable output from the motor to mechanical system
- Extend lifetime of mechanical parts, decrease OPEX and service cost

Altivar 340 range up to 75 kW

Dynamic Response

Rising time can be lower than 1ms, which is up to 40 % better than traditional control methods. It features:

- Optimized machine dynamic performance, for applications such as Material handling, Material working and crushing process that are requiring faster response.
- Improve manufacturing process efficiency and flexibility, it will be more adaptable within manufacturing process.
- Even in the field-weakening area, it can increase productivity on the machine, no need to increase size of drives and related system.
- Higher speed operational range provide machine builders more possibility.
- It can optimize machines without additional investment, and bring more options for OEM customers in their own product lines.

Altivar 900 range from 0.75 kW up to 2.6 MW

Altivar Process range

Process automation

Altivar Process drives are specifically designed to meet the requirements of the following market segments:

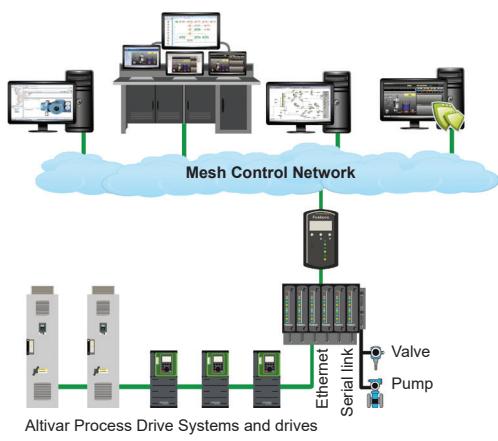

- Oil & gas
- Mining, minerals & metals
- Consumer packaged goods (CPG)
- Water & wastewater

The Altivar Process 900 series is focused on maximum productivity with exceptional motor control and connectivity.

It offers special functions for industrial process segments:

- Excellent motor performance on any type of motor
- Total control of any kind of coupling in master/slave applications
- Network services to help ensure operation continuity even in case of connection breakdown
- Web server and data logging to help reduce downtime through rapid troubleshooting and preventive maintenance

EcoStruxure Foxboro DCS process automation system

Altivar Process in EcoStruxure Foxboro DCS architecture

EcoStruxure Plant™ integration

The association of Altivar Process services with Schneider Electric process automation control systems like EcoStruxure Foxboro DCS (for process systems) or EcoStruxure Hybrid DCS (for hybrid systems) offers a high-performance, global automation and motor control solution with optimized total cost of ownership (TCO).

The solution provides operational integrity for people, processes, and assets, with improved maintenance support to help reduce downtime and ensure operation continuity.

It offers operational insight by accessing more information to optimize the process and control energy efficiency.

Based on market standards (FDT/DTM, Ethernet, etc.), it is a sustainable, scalable solution that enables processes to be adapted easily and affordably.

Oil & gas applications

- Hydrocarbon production:
 - Drilling
 - Offshore and onshore extraction
 - Water treatment and re-injection
 - Crude oil storage
 - Separation
 - Pipeline pumping
 - Storage
 - Refining
 - DOF (digital oil field)

Use

- PCP (progressive cavity pump)
- ESP (electrical submersible pump)
- Rod pump
- Mud pump
- Rotary table, top drive
- Draw works
- Regasification compressor

Process automation (continued)

Mining, minerals & metals applications

- Open-pit or underground mining
- Stockpiling/homogenization
- Concentration/mineral separation
- Solid-liquid separation
- Final handling/transport
- Clinker production
- Cement production

Use

- Long-distance heavy conveying
- Bucket wheel excavator
- Special cranes:
 - Gantry cranes
 - Grab cranes
- Grinding mills (ball mills, SAG and AG mills)
- Spiral and magnetic separators
- Reclaimers and stackers
- Ship loaders
- Mobile mining machines
- Tunnel boring machines
- Vibro feeders
- Crushers
- Long belt conveyors
- Kiln main drives
- Separators for VRM (vertical roller mills)

Consumer packaged goods (CPG) applications

- Dairy beverage
- Agribusiness

Use

- Conveyors
- Mixers
- Shredders
- Centrifuges
- Hot rotary dryers
- Extruders

Water & wastewater applications

- Treatment plant
- Wastewater treatment

Use

- Decanter

1

Cooling system with two separate air flows

General presentation of the offer

Altivar Process drives can help improve equipment performance and reduce operating costs by optimizing energy consumption and user comfort.

Altivar Process drives provide a wide range of integrated functions, such as:

- Safety and automation functions that meet the requirements of some of the most demanding applications
- Various optional fieldbus modules available for seamless integration into the main automation architectures
- Numerous configurable I/O as standard to facilitate adaptation to specific applications
- Intuitive commissioning using the graphic display terminal
- Local and remote access and monitoring using the embedded Web server
- Energy savings and protection of the grid by means of integrated harmonic filters
- Installation EMC conformity by means of integrated EMC filters

Depending on the power range, Altivar Process is available with several mounting types, protection ratings, and cooling concepts for building air-cooled and liquid-cooled solutions in higher power ranges:

- Wall-mounting IP20 and 21/UL Type 1 from 0.75 kW to 315 kW/1 HP to 500 HP, ready-to-use for easy integration inside or without an enclosure in an electrical room
- Wall-mounting IP55 from 0.75 to 90 kW/1 HP to 125 HP, ready-to-use for easy integration in harsh environments and installations close to the system to reduce the length of the motor cable (the wall-mounting IP55 offer is available with and without a disconnect switch)
- Floor-standing IP21 and IP54 from 110 to 315 kW, ready-to-use with minimum dimensions for easy, optimized integration in an electrical room in a standard or harsh environment
- Floor-standing IP23 and IP54 from 110 to 800 kW, fully customizable by configuration tool, ready-to-use. Up to 2600 kW available as Engineered Drive System variant.
- Cabinet integration from 75 to 2600 kW/125 to 2600 HP, designed for easy and cost-effective integration of power-intensive drives into cabinets
- Cabinet integration IP20 from 0.75 to 90 kW/1 to 125 HP, for easy and cost-effective drive configuration inside enclosures

Cabinet integration

Get more than just a drive with the Altivar Process Modular offer for cabinet integration:

- Standardized and cost-effective integration with power rating through module paralleling up to 2600 kW/2600 HP
- Integrated category C3 EMC filter
- Reduced harmonics with integrated line choke for standard drives and less than 3% THDi for Low Harmonic (LH)/Regenerative drives
- Integrated highly efficient motor filter reducing the risk of motor winding insulation aging and motor damage even for longer motor cables
- Ready-to-connect line supply terminals on top and motor terminals at the bottom
- Reduced downtime of assets thanks to easily changeable electric core components such as power module with wheel (for standard drives) and power fan (for LH/Regen and standard drives) inside a drawer accessible from the front face

Enclosed drives solutions

The floor-standing IP21/IP54 fully customizable turnkey drive offers integrate:

- Drive power and control modules
- Semiconductor protection fuses
- Line chokes to limit THDi levels
- A filter to help protect the motor against the effects of dv/dt
- Accessible busbars to simplify the motor wiring and power wiring

The IP54 variant has additional equipment, such as:

- A main switch with external handle
- A system for separating the cooling air flow between the power and control sections, allowing operation in a very polluted environment as well as optimum management of thermal stress in the plant room

Altivar Process drives can be supplied as Engineered Drive System variants from 75 to 2600 kW/125 to 2600 HP, developed by Schneider Electric based on customer specifications. Engineered drives are available as standard with THDi level < 48% and as a Low Harmonic/Regen solution with THDi level < 3%.

ATV930D45Y6 equipped with IP20/UL Type 1 wall-mounting kit

General presentation of the offer (continued)

Rugged

Altivar Process drives are designed to adapt to the harshest environments.

- Ambient operating temperature
 - Wall-mounting drives:
 - IP20 and IP21: up to 160 kW/250 HP, -15...+50 °C/5...122 °F as standard, up to 60 °C/140 °F with derating; above 160 kW/250 HP, -10...+40 °C/14...104 °F as standard, up to 60 °C/140 °F with derating
 - IP55: -15...+40 °C/5...104 °F as standard, up to 50 °C/122 °F with derating
 - Floor-standing IP21/IP23/IP54 and cabinet integration drives:
 - 0...40 °C/32...104 °F as standard
 - 40...50 °C/104...122 °F with derating
 - Relative humidity without condensing: 5...95%
 - Storage and transport temperature: -40...+70 °C/-40...+158 °F
 - Operating altitude:
 - 0...1,000 m/0...3,281 ft without derating
 - 1,000...4,800 m/3,281...5,700 ft with derating of 1% per 100 m/328 ft (1)
 - Withstand to harsh environments:
 - Chemical class 3C3 conforming to IEC/EN 60721-3-3 (1)
 - Mechanical class 3S3 conforming to IEC/EN 60721-3-3 (1)
 - Climatic class 3K3 conforming to IEC/EN 60721-3-3
 - Printed circuit boards with protective coating
 - Protection rating to suit requirements:
 - IP00 for mounting in an enclosure, depending on the model
 - IP20 and 21/UL Type 1 for wall mounting in a plant room and in an enclosure
 - IP55 for wall mounting, with protection against dust and water jets
 - Floor-standing IP21 or IP23
 - Floor-standing IP54, with protection against dust and water jets
 - Engineered Drive Systems variants up to IP66
- A large number of external options can be combined with the Altivar 900:
- Braking units and resistors
 - Line chokes (see [page 2/52](#)) and passive filters (see [page 2/44](#))
 - Additional EMC input filters for reducing conducted emissions on the line (see [pages 2/50](#) and [2/51](#))
 - Dv/dt and sinus filters for long cable runs or to remove the need for shielding (see [pages 2/53](#) to [2/57](#))
 - Mounting options: The Altivar 900 drive can be mounted in a variety of ways to adapt to the various needs of an installation:
 - Mounting without an enclosure: The Altivar 900 drive can be mounted directly on a wall without having to be installed inside an enclosure. IP20 and 21/UL Type 1 conformity can be achieved by using kits, for drives above 110 kW/150 HP at 380...480 V and for drives from 2.2 to 90 kW/3 to 125 HP at a 500...690 V supply voltage (see [page 2/13](#)).
 - Optimized enclosures: A patented flange mounting kit is used to remove the heat generated by the power unit outside the enclosure when the variable speed drive is integrated in a cabinet (see [page 2/13](#)).

(1) Altivar Process ATV930C22...C31N4 drives are certified as chemical class 3C2 and mechanical class 3S2 conforming to IEC/EN 60721.

Altivar Process drive THDi

General presentation of the offer (continued)

Energy

Altivar Process drives help to optimize power consumption by reducing the rms input current for the same load.

- Standard offer:
 - THDi $\le 48\%$ for 80 to 100% load, which is used to maintain an optimum power factor on the most common operating range
 - Embedded low harmonic DC choke technology complying with standard IEC 61000-3-12 for the 380...480 V offer
 - Embedded line choke for cabinet integration and floor-standing drive solutions
- Passive filter options
 - Low Harmonic offer compatible with standard IEEE 519

Environment

The Altivar Process drive has been developed to meet the requirements of directives regarding protection of the environment and to anticipate future changes in regulations:

- RoHS-2 (1)
- REACH (2) + solution for REACH Substitute It Now (halogen-free wiring and plastics)
- PEP (Product Environmental Profile) eco-passport program for reducing the carbon footprint and conserving raw materials
- EoLI (end-of-life instruction) (3)
- More than 70% recyclable materials (new ruling)
- Efficient energy management: 30% reduction in consumption

Electromagnetic compatibility (EMC)

Compliance with electromagnetic compatibility requirements has been incorporated into the design of the Altivar Process Modular drives, which simplifies installation and provides an economical means of helping to ensure equipment meets CE marking requirements.

Altivar Process drives have a category C2 or C3 EMC filter, except ATV930...M3 and ATV930...M3C models that can be equipped with an additional filter to meet more stringent requirements (see [page 2/50](#)).

Altivar Process Modular drives have category C3 EMC filters that allow 300 m/980 ft of shielded motor cables.

Installation/Maintenance

Altivar Process drives are ergonomically designed to adapt to any type of installation:

- Products, systems, or integrated in iMCC
- IP00 modules that can be integrated in cabinets with a protection rating up to IP66 as a standard integration
- IP20 and 21/UL Type 1, IP55, IP54
- Easy installation of products and systems:
 - Cable entry equipped with Romex cable clamps to maintain an EMC connection for the power and control cable (optional for 500...690 V drives)
 - Color code for connections to the removable terminal blocks on the HMI block
 - Long cable for wall mounting: Up to 150 m /492 ft with category C3 EMC filter at 380...480V
 - Long cable for Altivar Process Modular and floor-standing offer: highly efficient integrated motor filters for dv/dt and common mode reduction and voltage peak limitation allow motor cable lengths up to 300 m/980 ft with shielded cable (category C3 environment) and 500 m/1,640 ft with unshielded cable (category C4 environment).
- Asynchronous or synchronous motor in open loop or closed loop for 0.1...599 Hz output frequency
- Special motors: Conical sliding rotor, reluctance motor
- Lower maintenance costs due to drive's ergonomic design:
 - Fans can be replaced in less than 5 minutes
 - No maintenance tool required
 - Limited number of parts
- Embedded Web server:
 - Compatible process elements for easier implementation
 - Direct worldwide access to monitoring and maintenance functions:
 - Reading values
 - Modifying data
 - Configuring parameters
 - Changing controller status

(1) European directive 2002/95/EC Restriction of Hazardous Substances.

(2) European regulation 1907/2006.

(3) According to IEC 62635 Enhanced Guidelines.

Integrated functions

Altivar Process drives include numerous advanced functions for the more complex applications in each market segment.

Advanced functions

- High-performance motor control with an overload torque up to 180% T_n in an open or closed loop
- Asynchronous, synchronous, special motors: all efficiency classes, brand independent, permanent magnet motors, torque motors, conical sliding rotor, reluctance motor
- Integrated EtherNet/IP and Modbus TCP dual port, cybersecurity (Achilles Level 2)
- Smart integration in PlantStruxure and Foxboro Evo process automation systems
- Optimized energy efficiency, detection of energy consumption drift of the installation
- Adaptation to the process by dedicated functions with modular design
- Embedded safety functions STO SIL3
- Master/slave and load sharing with drive-to-drive capability:
 - torque sharing on rigid coupling
 - torque sharing on elastic coupling
- Contextual access to technical documentation through dynamic QR code
- Continuous and historical real-time measurements with customizable dashboards
- Predictive maintenance (e.g. temperatures with PT100/1000 probe, fan monitoring, etc.)

Power measurement function

Altivar Process drives integrate a power measurement function accurate to within 5%, based on measurement of the motor voltage and the power supply:

- Process drift detection for installation reliability throughout its entire service life
- Useful system performance information provided by comparing the energy used with the energy produced:
 - Typical KPIs:
 - Specific energy consumption

Users are therefore able to monitor and analyze input power, energy produced, and the KPIs directly from the drive or from the process management system.

Safety and monitoring functions

The safety function STO and numerous monitoring functions are provided to help protect people and equipment.

- Advantages:
 - Time savings in terms of installation design and compliance
 - Fewer components and cables
 - Optimum space
 - Simplified setup of machines
 - Improved maintenance performance; limited machine intervention time and installation downtime
 - Optimized conditions for maintenance operations
- Conformity to standards EN/IEC 61508, EN/ISO 13849, and IEC 61800-5-2
- Integrated STO (Safe Torque Off) function, SIL3/Plc
- Monitoring function to help protect against premature wear

1

Altivar Process DTM in EcoStruxure Control Expert

Integration

Fieldbus protocols

- EtherNet/IP and Modbus/TCP dual port and Modbus serial link:
 - Standard Modbus and Ethernet protocols
 - Connection of configuration and runtime tools
 - Control and supervision of the Altivar Process in process architectures (controllers, SCADA, HMIs, etc.) in industrial networks (read/write data)
 - Diagnostic, supervision, and fieldbus management functions
- Ethernet services:
 - SNMP, SNTP, BootP & DHCP, IP v6, cybersecurity services, FDR
 - Open Ethernet topologies

Integration of configuration and runtime tools

- FDT/DTM technology (see [page 2/17](#)):
 - Drive configuration, diagnostics, and control using EcoStruxure Control Expert or Foxboro Evo software

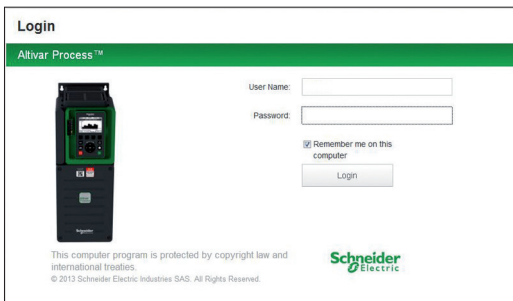

Configuration and runtime tools

- Graphic display terminal (see [page 2/14](#)):
 - Drive control, adjustment, and configuration
 - Display of current values (motor, I/O, etc.)
 - Configuration storage and download
 - Duplication of one drive configuration on another drive from a PC or another drive
 - Remote use by means of appropriate accessories (see [page 2/15](#))
 - Connection to several drives using multidrop link components (see [page 2/15](#))
- Embedded Web server (see [page 2/16](#)):
 - Easily accessible from any PC, iPhone, iPad, Android system, and major Web browsers
 - Network diagnostics in real time
 - Read/write values
- SoMove software (see [page 2/17](#)):
 - Advanced functions for configuration, setup, and maintenance of Altivar Process drives

Integrated services

Altivar Process drives feature integrated services to achieve optimum time savings:

- Simplified communication:
 - Ethernet dual port with embedded Web server
- Energy management (integrated power measurement)
- Dynamic predictive maintenance
- 3 QR codes:
 - Access to the Customer Care Center application and product data sheet
 - Direct access to description of the functions
 - QR code generated in the event of a detected error (red screen): Identification of the detected error, probable causes and remedies

Embedded Web server login screen

ATV930...N4F, ATV930...M3, ATV930...Y6, ATV950...N4, ATV950...N4E

Extensive offer

The Altivar Process wall-mounting and floor-standing products offer covers motor power ratings from 0.75...315 kW/1...500 HP for three-phase voltages between 200...240 V, 380...480 V, and 500...690 V.

Three-phase power supply	Motor power	Degree of protection	Reference
200...240 V (-15...10%)	0.75 kW...75 kW 1...100 HP	IP21 UL Type 1	ATV930U07M3...D45M3 ATV930D30M3C...D75M3C
380...480 V (-15...10%)	0.75 kW...315 kW 1...500 HP	IP21 UL Type 1	ATV930U07N4...C22N4 (1)
		IP21 UL Type 1	ATV930D55N4C...C31N4C (2)
		IP55	ATV950U07N4...D90N4 ATV950U07N4E...D90N4E (3)
380...440 V (-15...10%)	110 kW...315 kW	IP21 IP54	ATV930C11N4F...C31N4F ATV950C11N4F...C31N4F
500...690 V (-15...10%)	2.2...90 kW 3...125 HP	IP20 UL Type 1	ATV930U22Y6...D90Y6

(1) Also ATV930U07N4Z...D22N4Z (IP20 UL Type 1)
 (2) Also ATV930D55N4Z...D90N4Z (IP00 UL Type 1)
 (3) Integrated disconnect switch

Normal duty and Heavy duty modes

Altivar Process variable speed drives are designed for use in two operating modes that can optimize the drive nominal rating according to the system constraints.

These two modes are:

- Normal duty (ND): Dedicated mode for applications requiring a slight overload (up to 120%) with a motor power no higher than the drive nominal power
- Heavy duty (HD): Dedicated mode for applications requiring a significant overload (up to 150%) with a motor power no higher than the drive nominal power derated by one rating

Accessories and options

Altivar Process drives are designed to take numerous accessories and options to increase their functionality and also their capacity for integration and adaptation.

Accessories

- Drive:
- Fan kit (see [page 2/12](#))
- Graphic display terminal:
- Remote mounting kit for mounting on enclosure door (see [page 2/15](#))
- Multidrop connection accessories for connecting several drives to the RJ45 terminal port (see [page 2/15](#))

Options

- Modules (see [page 2/29](#)):
- Extended I/O module:
 - 2 analog inputs
 - 6 digital inputs
 - 2 digital outputs
- Extended relay module:
 - 3 NO contacts
- Communication:
 - CANopen bus: RJ45 daisy chain, SUB-D, 5-way screw terminals
 - PROFINET bus
 - PROFIBUS DP V1 bus
 - EtherCAT
 - DeviceNet bus
- Encoder modules (see [page 2/28](#)):
- Digital encoder interface module 5/12 V
- Analog encoder interface module
- Resolver interface module
- HTL encoder interface module
- Safety modules
- Safety module advanced
- CIP safety
- Braking units and braking resistors (see [page 2/36](#))
- Passive filters (see [page 2/44](#))
- Additional EMC input filters for reducing conducted emissions on the line (see [page 2/50](#))
- Output filters:
- dv/dt filters (see [page 2/53](#))
- Sinus filters (see [page 2/56](#))
- Common mode filters (see [page 2/58](#))

Motor starters

Schneider Electric offers combinations of circuit breakers and contactors to be able to use Altivar Process drives in optimum conditions (see [page 2/62](#)). For prospective line short-circuit current up to 100 kA, please consult our [Customer Care Teams](#).

(1) These values are given for a nominal switching frequency of 4 kHz up to **ATV930D22M3** or 2.5 kHz for **ATV930D30M3...D45M3** and **ATV930D30M3C...D75M3C** drives, for use in continuous operation. The switching frequency is adjustable. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves in the [Installation Manual](#)).

(2) Typical value for the indicated motor power and for the prospective line Isc.

(3) Altivar Process **ATV930...M3** drives have been designed without an EMC filter. An additional filter can be added to help meet more stringent requirements and reduce electromagnetic emissions.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) The power section is accessible at the bottom of the drive. Product supplied as IP00 for mounting in an enclosure. For IP21 wall mounting, order the IP21/UL Type 1 conformity kit **VW3A9704** separately (see [page 2/13](#)).

Note: Consult the summary tables of possible drive, option, and accessory combinations (see [page 2/18](#)).

(1) These values are given for an adjustable nominal switching frequency of 4 kHz for ATV930U07N4...ATV930D45N4 drives or 2.5 kHz for ATV930D55N4...C22N4 drives, for use in continuous operation.

Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves in the [Installation Manual](#)).

(2) Typical value for the indicated motor power and for the prospective line Isc.

(3) For ATV930...N4Z cabinet integration drives, see [pages 3/6 and 3/7](#) in the cabinet integration section.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) Category C2 EMC filter for ATV930U07N4...D45N4 drives. Category C3 EMC filter above ATV930D45N4.

(7) Product supplied as IP20/UL Type 1 with braking unit for wall mounting and cabinet mounting.

(8) Product supplied as IP00 for mounting in an enclosure. For IP21/UL Type 1 wall mounting, a conformity kit should be ordered separately (see [page 2/13](#)).

Note: Consult the summary tables of possible drive, option, and accessory combinations (see [page 2/18](#)).

HD	75	100	134.3	118.1	98.2	50	145	217.5		

(1) These values are given for an adjustable nominal switching frequency of 4 kHz up to **ATV950D45N4E** or 2.5 kHz for **ATV950D55N4E...D90N4E** drives, for use in continuous operation. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves in the [Installation Manual](#)).

(2) Typical value for the indicated motor power and for the prospective line Isc.

(3) Supplied with cable gland.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) Category C2 EMC filter for **ATV950U07N4E...D45N4E** drives. Category C3 EMC filter above **ATV950D45N4E**.

Note: Consult the summary tables of possible drive, option, and accessory combinations (see [page 2/18](#)).

(1) Product supplied as IP00 for mounting in an enclosure. For IP20/UL Type 1 wall mounting, an adaptation kit should be ordered separately.

(2) These values are given for use in continuous operation with a nominal switching frequency between 2.5 kHz (ATV930D37Y6...D90Y6) and 4 kHz (ATV930U22Y6...D30Y6). The switching frequency is adjustable from 1...4.9 kHz (ATV930D37Y6...D90Y6) to 2...8 kHz (ATV930U22Y6...D30Y6).

Above the nominal switching frequency, the drive will automatically reduce it in the event of an excessive temperature rise.

For continuous operation above the nominal switching frequency, nominal drive current should be derated according to the derating curves in the [Installation Manual](#).

(3) Typical value for the indicated motor power and for the maximum prospective line Isc.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

Note: Consult the summary tables of possible drive, option, and accessory combinations (see [page 2/18](#)).

(1) All accessories designed for use with N4 suffix products ATV930...U75N4 and ATV930D11N4...D90N4 can also be used with their ...N4Z suffix equivalent products.

(2) RUE-2192 patented system.

2

Graphic display terminal (example shows dynamic speed and torque)

Detected fault: The screen's red backlight is activated automatically

Embedded dynamic QR codes for contextual, instantaneous access to online help

Scanning the QR code from a smartphone or tablet

Instant access to online help

Graphic display terminal (supplied with the drive)

This terminal can be:

- Connected and mounted on the front of the drive
- Connected and mounted on an enclosure door using a remote mounting accessory
- Connected to a PC to exchange files via a Mini USB/USB connection (1)
- Connected to several drives in multidrop mode (see [page 2/15](#))

This terminal is used to:

- Control, adjust, and configure the drive
- Display current values (motor, I/O, and process data)
- Display graphic dashboards such as the energy consumption monitoring dashboard
- Store and download configurations (several configuration files can be stored in the 16 MB memory)
- Duplicate the configuration of one powered-up drive on another powered-up drive
- Copy configurations from a PC or drive and duplicate them on another drive (the drives must be powered on for the duration of the duplication operations)

Other characteristics:

- 24 integrated languages (complete alphabets) covering the majority of countries around the world (other languages can be added; consult the [graphic display terminal page](#) on our website)
- 2-color backlit display (white and red); if an error is detected, the red backlight is activated automatically (function can be disabled)
- Operating range: -15...50 °C/5...122 °F
- Degree of protection: IP65
- Trend curves: Graphic display of changes over time in monitoring variables, energy data, and process data
- Embedded dynamic QR codes for contextual, instantaneous access to online help (diagnostics and settings, etc.) using a smartphone or tablet
- Real-time clock with 10-year backup battery providing data acquisition and event timestamping functions even when the drive is stopped

Description

Display:

- 8 lines, 240 x 160 pixels
- Displays bar charts, gauges, and trend charts
- 4 function keys to facilitate navigation and provide contextual links for enabling functions
- "STOP/RESET" button: Local control of motor stop command/clearing detected errors
- "RUN" button: Local control of motor run command
- Navigation buttons:
 - OK button: Saves the current value (ENT)
 - Turn ±: Increases or decreases the value, goes to the next or previous line
 - "ESC" button: Aborts a value, parameter, or menu to return to the previous selection
 - Home: Root menu
 - Information (i): Contextual help

Remote mounting kit for mounting graphic display terminal on enclosure door (front panel)

Remote mounting kit for graphic display terminal (rear panel)

Example of multidrop architecture for graphic display terminal

Accessories for graphic display terminal

- Remote mounting kit for mounting on enclosure door with IP65 protection rating as standard

The kit comprises:

- Tightening tool (also sold separately under the reference ZB5AZ905)
- 1 Cover plate to maintain IP65 protection when there is no terminal connected
- 2 Mounting plate
- 3 RJ45 port for the graphic display terminal
- 4 Seal
- 5 Fixing nut
- 6 Anti-rotation pin
- 7 RJ45 port for connecting the remote-mounting cordset (10 m/33 ft maximum). Cordsets should be ordered separately depending on the length required
- 8 Grounding connector

Drilling a hole with a standard Ø 22 tool, as used for a pushbutton, allows the unit to be mounted without needing a cut-out in the enclosure (Ø 22.5 mm/Ø 0.89 in. drill hole).

IP65 remote mounting kit for Ethernet port (1)
Ø 22 RJ45 female/female adapter with seal

Set of 10 x IP55 shutters:
To maintain IP55 protection when the graphic display terminal is removed (2)

Multidrop connection accessories

These accessories are used to connect a graphic display terminal to several drives via a multidrop link. This multidrop connection uses the RJ45 terminal port on the front of the drive.

Connection accessories

Description	Sold in lots of	Unit reference	Weight kg/ lb
Modbus splitter box 10 RJ45 connectors and 1 screw terminal block	–	LU9GC3	0.500/ 1.102
Modbus T-junction boxes With 0.3 m/0.98 ft integrated cable	–	VW3A8306TF03	0.190/ 0.419
Modbus line terminator For RJ45 connector	–	VW3A8306RC	0.210/ 0.463
Modbus line terminator For RJ45 connector	R = 120 Ω C = 1 nf	2 VW3A8306RC	0.010/ 0.022

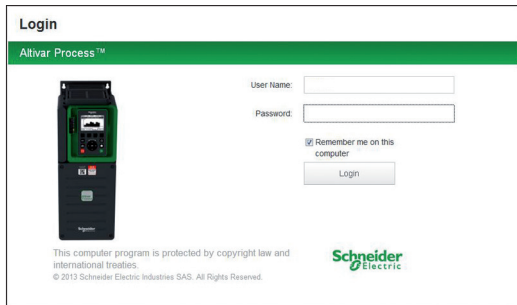

Cordsets (equipped with 2 RJ45 connectors)

Used for	Length m/ ft	Reference	Weight kg/ lb
Serial link	0.3/ 0.98 1/ 3.28 3/ 9.84	VW3A8306R03 VW3A8306R10 VW3A8306R30	0.025/ 0.055 0.060/ 0.132 0.130/ 0.287

(1) Used to connect a remote PC to the RJ45 port on an IP21 drive mounted in an enclosure or on a wall. Drill hole with a standard Ø 22 tool, as used for a pushbutton. (Requires a remote-mounting cordset VW3A1104R●●● equipped with 2 RJ45 connectors).

(2) Only compatible with ATV950 drives.

Login screen

Customizable widgets

Drive adjustment parameters

Energy dashboard

Web server

Presentation

- The Web server can be accessed:
 - For a drive not connected to an Ethernet network
 - Via an Ethernet cable or the Schneider Electric WiFi dongle (the drive then appears as a network device)
 - For a drive connected to an Ethernet network
 - From any point on the network by entering the drive IP address
- The Web server is used for:
 - Commissioning the drive (setting configuration parameters and enabling the main functions)
 - Monitoring energy and process data, as well as drive and motor data
 - Diagnostics (drive status, file transfer, detected error and warning logs)

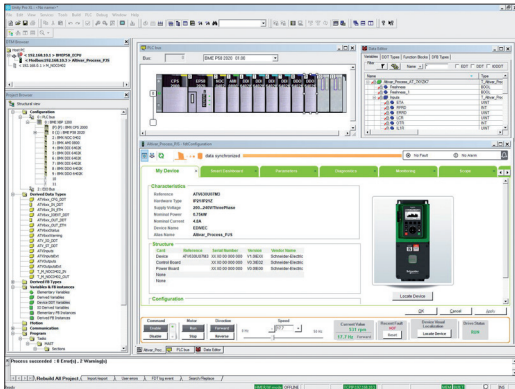

Description

The Web server is structured around 5 tabs.

- “My dashboard” tab:
 - Configurable using a wide choice of widgets; groups all the information and dashboards selected by the user on one page
- “Display” tab:
 - Monitors energy indicators, efficiency, and performance
 - Displays process data
 - Monitors drive parameters and status
 - Shows the I/O state and assignment
- “Diagnostics” tab:
 - Drive status
 - Time- and date-stamped detected error and warning logs
 - Network diagnostics
 - Access to drive self-tests
- “Drive” tab:
 - Access to the main drive adjustment parameters with contextual help
- “Setup” tab:
 - Network configuration
 - Access management
 - Transferring and retrieving drive configurations
 - Exporting data acquisition files and logs
 - Customizing pages (colors, logos, etc.)

Other characteristics:

- Ease of connection via the RJ45 port or Wi-Fi connection
- Password-protected authentication (modifiable password; access rights can be configured by administrator)
- No downloads or installation necessary
- Web server can be disabled
- Works in a similar way on PCs, iPhones, iPads, Android systems, and the following major Web browsers:
 - Internet Explorer® (version 8 or higher)
 - Google Chrome® (version 11 or higher)
 - Mozilla Firefox® (version 4 or higher)
 - Safari® (version 5.1.7 or higher)

Altivar Process DTM in EcoStruxure Control Expert

DTM

Presentation

Using FDT/DTM technology it is possible to configure, control, and diagnose Altivar Process drives directly in EcoStruxure Control Expert and SoMove software by means of the same software brick (DTM).

FDT/DTM technology standardizes the communication interface between field devices and host systems. The DTM contains a uniform structure for managing drive access parameters.

Specific functions of the Altivar Process DTM

- Offline or online access to drive data
- Transfer of configuration files from and to the drive
- Customization (dashboard, My Menu, etc.)
- Access to drive parameters and option cards
- Oscilloscope function
- Graphic interface to assist with configuration of the Altivar Process functions
- Energy and process dashboards
- Graphic display of system operation and comparison with optimum operation (dynamic speed and torque curves)
- Detected error and warning logs (with timestamping)

Advantages of the DTM library in EcoStruxure Control Expert:

- Single tool for configuration, setup, and diagnostics
- Network scan for automatic recognition of network configuration
- Ability to add/remove, copy/paste configuration files from other drives in the same architecture
- Single input point for all parameters shared between the ePAC (programmable controller) and the Altivar Process drive
- Creation of drive profiles for implicit communication with the ePAC as well as dedicated profiles for programs with DFBs (derived function blocks)
- Integration in the fieldbus topology
- Drive configuration is an integral part of the EcoStruxure Control Expert project file (STU) and the archive file (STA)
- Configuration, transfer, and monitoring of the functional safety functions

Advantages of the DTM library in SoMove:

- Drive-oriented software environment
- Wired connection to the Ethernet communication port
- Standard cable (file transfer performance)
- Function block library for EcoStruxure Control Expert
- Display blocks for Vijeo Citect

Third-party software and downloads:

- The Altivar Process DTM library is a flexible, open, and interactive tool that can be used in a third-party FDT.
- DTMs can be downloaded from [our website](#).

SoMove software

Presentation

SoMove software for PC is used to configure, set up, and maintain Altivar Process drives.

In addition to the functions offered by the Web server, SoMove software features the oscilloscope function for accurate display of data samples, as well as access to multi-drive applications.

The software can be connected to Altivar Process variable speed drives via:

- Ethernet Modbus and Wi-Fi connection with the Wi-Fi dongle TCSEGWB131W
- Ethernet Modbus TCP connection

For more information on SoMove setup software, please consult the [SoMove Setup software for motor control devices](#) catalog.

SoMove software

(1) In "Normal Duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz. For example: an ATV630D75M3 drive with sinus filter can be used on a 55 kW motor.

(2) Maximum length of unshielded cable: 300 m/984 ft. For other lengths or for shielded cables, see page 2/58.

(3) Electronic power fan for drive, with 1 unit for ATV930C22N4(C), 2 units for ATV930C25N4C, and 3 units for ATV930C31N4C.

(4) With braking unit.

(5) Without braking unit.

Presentation

The safety module advanced allows Altivar 900 variable speed drives to access additional safety functions. This offers a complex functional safety device that helps to provide installation monitoring.

The safety module advanced optimizes the overall cost of the installation by avoiding the need for additional external devices, while conforming to international safety standards. As a result, wiring is cheaper and quicker.

It includes the following safety functions compliant with the IEC/EN 61800-5-2 standard:

- Safe Stop 1 (SS1)
- Safe Limited Speed (SLS)
- Safe Brake Control (SBC)

The safety module also includes two additional safety functions:

- Safe Maximum Speed (SMS)
- Guard Door Locking (GDL)

The Altivar 900 drive must be equipped with an additional module support (VW3A3800) to be able to insert the safety module (VW3A3802).

Safety functions

Safe Stop 1 (SS1) function

The SS1 integrated safety function causes a category 1 safe stop. This function monitors the deceleration according to a dedicated deceleration ramp and shuts off the torque once standstill has been achieved.

Safe Limited Speed (SLS) function

The SLS integrated safety function can be initiated by activation of safety function inputs. This function prevents the motor from exceeding the specified speed limit. If the motor speed exceeds the specified speed limit value, safety function STO is triggered.

Safe Brake Control (SBC) function

The SBC integrated safety function provides an output signal to command an external relay in order to control external brakes.

Safe Maximum Speed (SMS) function

This function prevents the speed of the motor from exceeding the predefined speed limit.

- Two different speed limits can be defined and can be selected by logic inputs.
- If the motor speed exceeds the predefined speed limit value, safety function STO is triggered.

Once the SMS function is configured, it is continuously active.

Guard Door Locking (GDL) function

The GDL function allows the guard door lock to be released when the motor power is turned off.

(1) The Altivar 900 drive must be equipped with an additional module support (VW3A3800) to be able to insert the safety module (VW3A3802).

Presentation

The CIP Safety module allows Altivar ATV900 variable speed drives to provide a fail-safe Ethernet connection between the drive and a Safety PLC using the CIP Safety protocol over Ethernet/IP.

ATV900 is connected over Ethernet via its embedded Ethernet/IP connection to communicate with the CIP Safety module via tunneling functionality.

It includes the following safety function, compliant with the IEC/EN 61800-5-2 standard:

- Safe Torque Off (STO) function SIL3/Plc

The Altivar 900 drive must be equipped with an additional module support (VW3A3800) to be able to insert the CIP Safety module (VW3A3809).

Activation of the STO function

- (1) Motor speed
- (2) Actual speed
- (3) STO function triggered from CIP Safety over Ethernet/IP by command safe word
- (4) Time

Safety functions

Safe Torque Off (STO) function

The CIP safety module activates the integrated STO safety function of the drive. This function ensures that no power that could cause torque or force is supplied to the motor.

Safety profile

Safety I/O

- Three connections
- Ethernet/IP: 1 x CIP I/O
- CIP Safety: 1 x safety input and 1 x safety output

Safety Open type

- Type 2a
- Type 2b

Conformity test

- ODVA CT18-ES

VW3A3420 digital encoder interface module

VW3A3422 analog encoder interface module

VW3A3423 resolver interface module

VW3A3424 HTL encoder interface module

Presentation

Encoder interface modules are used for flux vector control operation with sensor (FVC mode) for asynchronous motors, or for vector control operation with speed feedback (FSY mode) for synchronous motors.

They improve drive performance irrespective of the motor load state:

- Zero speed torque
- Accurate speed regulation
- Torque accuracy
- Shorter response times on a torque surge
- Improved dynamic performance in transient state

For asynchronous motors, in the other control modes (voltage vector control, voltage/frequency ratio), encoder interface modules improve static speed accuracy.

Depending on the model, encoder interface modules can also be used for monitoring, irrespective of the control type:

- Overspeed detection
- Load slipping detection

They can also transmit a reference value provided by the encoder input to the Altivar variable speed drive. This specific feature is used to synchronize the speed of several drives. The encoder options have a thermal sensor input to monitor one standard temperature sensor.

Four modules are available depending on the encoder technology:

- Encoder with digital output
- Encoder with analog output
- Resolver interface
- HTL encoder interface

The Altivar variable speed drive can only be equipped with one of the encoder interface modules. The interface encoder module is inserted in a dedicated slot. It is protected against encoder supply short circuits and overloads.

Altivar Process drives slots for additional I/O modules

Additional I/O modules

Presentation

By installing additional I/O modules, Altivar Process drives can be adapted to meet the needs of applications that manage additional sensors or specific sensors.

Two additional I/O modules are available:

- Extended I/O module
- Extended relay module

These modules are inserted in slots A and B on Altivar Process drives:

- 1 Slot A for additional I/O or fieldbus modules
- 2 Slot B for additional I/O modules and encoder modules

Extended I/O module

- 2 differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2- or 3-wire probes
 - 14-bit resolution
- 6 x 24 V \bar{V} positive or negative digital inputs
 - Sampling: 1 ms max
- 2 assignable digital outputs
- 2 removable spring terminal blocks

Extended relay module

- 3 relay outputs with NO contacts
- 1 fixed screw terminal block

Extended I/O module	6	2	2 (1)	–	VW3A3203	0.500/ 1.102
Extended relay module	–	–	–	3 (2)	VW3A3204	0.400/ 0.882

(1) Differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2- or 3-wire probes. When configured as PTC probe inputs, they must never be used to monitor the temperature of an ATEX motor for applications in explosive atmospheres. To make an installation compliant with ATEX recommendations, please refer to the Installation Manual for each product.

(2) NO contacts.

Note: The extended digital and analog I/O module and extended relay output module can go in either slot A or slot B on Altivar Process drives.

However, the drives cannot take 2 modules of the same type (e.g. 2 extended I/O modules or 2 extended relay modules).

VW3A3203

VW3A3204

Presentation

Altivar Process drives have 3 built-in RJ45 communication ports as standard:

- 2 RJ45 EtherNet/IP and Modbus TCP ports
- 1 RJ45 serial port

Integrated communication protocols

Altivar Process drives integrate the EtherNet/IP and Modbus TCP and Modbus serial link communication protocols as standard.

- EtherNet/IP and Modbus TCP dual port
 - This offers standard services regularly used in industrial networks:
 - Connection to the Modbus TCP or EtherNet/IP network.
- EtherNet/IP adapter including standard CIP objects (AC/DC drive objects, CIP energy objects, etc.), compliant with ODVA specification.
- The RSTP connection allows ring topology to help ensure continuity of service.
- Dual port allows daisy chain connection to simplify cabling and network infrastructure (no need to use a switch).
- Modbus TCP message handling is based on the Modbus protocol and is used to exchange process data with other network devices (e.g. a controller). It provides Altivar Process drives with access to the Modbus protocol and to the high performance of the Ethernet network, which is the communication standard for numerous devices.
- SNMP (Simple Network Management Protocol) offers standard diagnostics services for network management tools.
- The FDR (Fast Device Replacement) service allows automatic reconfiguration of a new device installed to replace an existing device.
- Device integrity is reinforced by disabling some unused services as well as managing a list of authorized devices.
- Setup and adjustment tools (SoMove, EcoStruxure Control Expert with DTM) can be connected locally or remotely.
- The embedded Web server is used to display operating data and dashboards as well as to configure and perform system elements diagnostics from any Web browser.

These numerous services offered by Altivar Process drives simplify integration into Schneider Electric process automation control systems like M580 ePAC or Foxboro Evo DCS.

- Serial port
 - Field network operation for exchanging data with other devices via the Modbus protocol
 - Multidrop connection of the following HMIs and configuration tools:
 - The graphic display terminal supplied with the drive
 - A Harmony industrial HMI terminal
 - A PC with SoMove or EcoStruxure Control Expert setup software

The detailed specifications for the EtherNet/IP or serial communication ports, and the Modbus and Modbus TCP protocols are available on our [website](#).

Description

- 1 2 x RJ45 EtherNet/IP and Modbus TCP ports
- 2 RJ45 serial port
- 3 Slot A for additional I/O or fieldbus modules
- 4 Slot B for additional I/O modules and encoder modules
- 5 Removable screw terminal blocks for 24 V $\bar{\text{---}}$ power supply and integrated I/O
- 6 RJ45 serial link for HMI (graphic display terminal, Harmony terminal, etc.)

Altivar Process drives can only take one fieldbus module, in slot A **3** only. They cannot take 2 modules of the same type (e.g. 2 extended I/O modules or 2 extended relay modules). The drives can take one extended I/O module and one extended relay module in either slot A **3** or slot B **4**.

Note: The User Manuals and description files (gsd, eds) for devices on the fieldbuses and networks are available on our [website](#).

Altivar process drives ports and slots

Optional communication modules

The Altivar Process drive can also be connected to other industrial fieldbuses and networks by using one of the fieldbus modules available as an option. Fieldbus modules are supplied in “cassette” format for ease of mounting/removal.

Dedicated communication modules:

- CANopen:
- RJ45 daisy chain
- SUB-D
- Screw terminal block
- EtherCAT
- PROFINET
- PROFIBUS DP V1
- POWERLINK network
- DeviceNet

PROFINET and PROFIBUS DP V1 modules also support the Profidrive and CiA402 profiles.

It is possible to maintain communication using a separate power supply for the control and power sections. Monitoring and diagnostics via the network are possible even if there is no power supplied to the power section.

Functions

The drive functions can be accessed via the various communication networks:

- Configuration
- Adjustment
- Control
- Monitoring

Altivar Process drives offer a high degree of interfacing flexibility with the possibility to assign, by configuration, the different control sources (I/O, communication networks, and HMI terminal) to control functions in order to meet the requirements of complex applications.

Network services and parameters are configured using the SoMove drive setup software, or using EcoStruxure Control Expert software if the drive is being integrated into a PlantStruXure architecture.

Communication is monitored according to the specific criteria for each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a detected communication interruption, as follows:

- Define the type of stop when a communication interruption is detected
- Maintain last command received
- Fallback position at preset speed
- Ignore the detected communication interruption

Presentation

Altivar Process drive with braking unit

Braking units allow Altivar Process drives to operate while braking to a standstill or during “generator” operation, by dissipating the energy in the braking resistor.

ATV930U07M3...D45M3, ATV930U07N4...C22N4, ATV930U22Y6...D90Y6 and ATV950U07N4...D90N4 drives have a built-in dynamic brake transistor.

For ATV930D55M3C...D75M3C, ATV930C11N4C...C16N4C and ATV930C25N4C...C31N4C drives, a braking unit must be used.

Braking units provide IP20 protection. Thermal monitoring is provided by an integrated temperature probe.

Applications

High-inertia machines, machines with slow and fast cycles, high-power machines performing vertical movements.

(1) VW3A7105 is an external braking unit; it is not the same as the integrated braking unit on ATV930C11N4...C16N4 drives.

(2) For ATV930C25N4C and ATV930C31N4C variable speed drives, the braking unit is connected to the drive via internal connections.

PF151255

VW3A7741

Presentation

Braking resistors allow Altivar Process drives to operate while braking to a standstill, by dissipating the braking energy. They enable maximum transient braking torque.

Braking resistors are designed to be located outside the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas, and condensation.

Several resistor models are available, depending on the drive rating:

- With IP20 and IP23 casing and thermal monitoring provided by temperature-controlled switch or by the drive
- The internal circuits of Altivar Process drives rated 220 kW/350 HP or less at 400...480 V and 45 kW/60 HP or less at 200...240V have a built-in dynamic brake transistor.
- An external braking unit is necessary for wall-mounting Altivar Process drives above 220 kW at 400...480 V as well as 55 kW/75 HP and 75 kW/100 HP at 200...240 V.

Thermal monitoring

Braking resistors from VW3A7730 to VW3A7738 and from VW3A7742 to VW3A7757 are equipped with a thermal switch to detect overheating of the resistor. This thermal switch must be used upstream of the drive to switch off the mains contactor in case of overheating detection.

Refer to the wiring diagrams provided into the [braking resistors instruction sheet](#).

Applications

Braking resistors are designed for a defined cycle (see the three cycle types defined below).

Depending on your applications and cycles, you can use these resistors or define a new value:

- Braking resistors for light braking cycles for machines with cycles and inertia. The braking power is limited to 1.5 Tn for 0.8 s every 40 s.
- Braking resistors for medium braking cycles for machines with high inertia and conveyors. The braking power is limited to 1.35 Tn for 4 s every 40 s. (1)
- Braking resistors for severe braking cycles for machines with very high inertia and vertical movements (hoisting). The braking power is limited to 1.65 Tn for 6 s and Tn for 54 s every 120 s. (2)

(1) For **ATV930C22/25/31N4C** drives, the medium braking cycle power is limited to 1.2 Tn for 4 s every 40 s.

(2) For **ATV930C22/25/31N4C** drives, the severe (hoisting) braking cycle power is limited to 1.5 Tn for 6 s and Tn for 54 s every 120 s.

2

Light cycle	
$t = 40\text{ s}$	t : period
$t1 = 0\text{ s}$	$Tn1$: braking torque
$t2 = 0.8\text{ s}$	$Tn2$: braking torque
$Tn1 = 0$	Tn : nominal torque
$Tn2 = 1.5 \times Tn$

(1) Load factor for resistors: The value of the average power that can be dissipated at 50 °C/122 °F from the resistor into the casing is determined for a load factor during braking that corresponds to the majority of normal applications:

- Normal duty: 0.8 s braking with a 1.2 Tn braking torque for a 40 s cycle
- Heavy duty: 0.8 s braking with a 1.5 Tn braking torque for a 40 s cycle

Altivar Process drive with passive filter

Presentation

Passive filters are used to obtain total harmonic distortion of less than 10% or 5%. Reactive power increases at no load or low load. To help reduce this reactive power, the filter capacitors can be disconnected (see the diagrams on [our website](#)). Passive filters provide IP20 protection.

Applications

Reduction of current harmonics in order to use drives in the first environment (restricted distribution, domestic applications).

Altivar Process drive with integrated EMC filter

Altivar Process drive with additional EMC filter

Integrated EMC filters

Altivar Process drives (except ATV930●●●M3/M3C) have integrated radio interference input filters in accordance with the EMC standard for variable speed electrical power drive “products” IEC/EN 61800-3, edition 2, category C2 or C3 in environment 1 or 2, and to comply with the European EMC (electromagnetic compatibility) directive.

The integrated EMC filter runs off the leakage current to ground. The leakage current can be reduced by disconnecting the built-in EMC Filter (please refer to the [Installation Manual](#)). In this configuration, the product does not comply with the European EMC directive.

Additional EMC input filters

Additional EMC input filters can be used to meet more stringent requirements and are designed to reduce conducted emissions on the line supply below the limits of standard IEC/EN 61800-3 category C1, C2, or C3.

Use according to the type of line supply

Use of these additional filters is only possible on TN (neutral connection) and TT (grounded neutral) type systems.

Standard IEC/EN 61800-3, appendix D2.1, states that on IT systems (isolated or impedance grounded neutral), filters can cause permanent insulation monitors to operate in a random manner.

If a machine needs to be installed on an IT system, one solution is to insert an isolation transformer and connect the machine locally to a TN or TT system.

(1) The maximum lengths are given as examples only, as they vary depending on the stray capacitance of the motors and the cables used. If motors are connected in parallel, it is the total length of all cables that should be taken into account.

(2) Nominal filter current.

(3) Values given depend on the nominal switching frequency of the drive. This frequency depends on the drive rating.

Line chokes

A line choke can be used to reduce harmonic distortion of the current produced by the drive.

The choke values are defined for a voltage drop between phases of 3% and 5% of the nominal supply voltage. Values higher than this will cause loss of torque.

Line chokes allow ATV930U22Y6...D90Y6 drives to be used in applications requiring a harmonic level of THDi 48%.

Chokes must be installed upstream of the drive.

dv/dt filter

Altivar Process drive with dv/dt filter

Presentation

Altivar Process drives with supply voltages of 200...240 V and 380...480 V operate with the following maximum motor cable lengths: 150 m/492 ft for shielded cables and 300 m/984 ft for unshielded cables.

For a supply voltage of 500...690 V, maximum motor cable lengths are 10 m/32 ft for shielded cables and 20 m/65 ft for unshielded cables.

To limit the impact of dv/dt and overvoltages in the motor, it is advisable to add an output filter if the motor insulation type does not conform to IEC 600034-25:

- For cables <50 m/164.04 ft, a dv/dt output filter
- For cables >50 m/164.04 ft, a sinus filter (see page 60857/14)

For further information, please consult the white paper [An Improved Approach for Connecting VSD and Electric Motors](#).

Output filters are used to limit dv/dt at the motor terminals to 500 V/μs maximum for supply voltages up to 480 V, to 750 V/μs maximum for a supply voltage of 500 V, and to 1,000 V/μs maximum for a supply voltage of 690 V.

Output filters are designed to limit overvoltages at the motor terminals to less than:

- 800 V with a shielded cable 0 to 50 m (0 to 164 ft) long for a 400 V supply voltage
- 1,000 V with a shielded cable 50 to 150 m (164 to 492 ft) long for a 400 V supply voltage
- 1,500 V with a shielded cable 150 to 300 m (492 to 984 ft) long for a 400 V supply voltage (up to 500 m (1,640 ft) with an unshielded cable)
- 1,300 V for a 500 V supply voltage, cable length depending on the dv/dt filter combination
- 1,600 V for a 690 V supply voltage, cable length depending on the dv/dt filter combination

The performance of dv/dt filters will be affected if the maximum cable lengths are exceeded. For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that specified is used, the dv/dt filters may overheat.

The switching frequency must be less than 8 kHz.

Sinus filter

Altivar Process drive with sinus filter

Presentation

Sinus filters allow Altivar Process drives to operate with long motor cables:

- 500 m (1,640 ft) with a shielded cable
- 1,000 m (3,280 ft) with an unshielded cable

The minimum switching frequency at which sinus filters can operate is 4 kHz. This is the default value when the sinus filter function is activated on the variable speed drive (please refer to the [Programming Manual](#)).

The output frequency must be less than 100 Hz.

At 100% load, the voltage drop is less than 8% with output frequency 50 Hz and switching frequency 2 kHz.

Applications

For applications requiring:

- Long cable runs
- Motors connected in parallel
- Submersible pumps sensitive to dv/dt
- An intermediate transformer between the drive and the motor

(1) The filters are designed to operate in a switching frequency range of between 4 and 8 kHz.

(2) In "Normal duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz.

For example: An ATV930D75M3C drive with sinus filter can be used on a 55 kW motor.

 (3) In "Normal Duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz. For example:
 - An ATV930C13N4C drive with sinus filter can be used on a 110 kW motor.
 - An ATV930C16N4C drive with sinus filter can be used on a 132 kW motor.

Variable speed drives

Altivar Process ATV900

Option: Output filters

Common mode filters

Altivar Process ATV900 drive with common mode filter

Presentation

Sinus filters or dv/dt filters reduce the overvoltage across windings and high frequency currents in differential mode. But they have no effect on the common mode current between phases and the cable shielding, or between the windings and the stator/rotor of the motor.

Common mode filters offer several benefits:

- Reduction of RFI (radio frequency interference) of the motor cable and improvement of the effectiveness of the EMC filter for conducted emissions
- Reduction of the high frequency currents circulating in the motor bearings to help to prevent them from being damaged

It is possible to use the common mode filter at the output terminals of the drive, the dv/dt filter, or the sinus filter.

Note: The selection of a common mode configuration depends on the type and length of motor cable. An abnormal increase of the temperature indicates a possible saturation. Additional filters should be used to avoid it.

ATVRegen_63440_CPEJR16009

ATVRD15N4

ATVRegen_63440_CPEJR16010

ATVRU75N4

Presentation

The main function of the ATV Regen product is to provide an option to regenerate energy back to the supply mains that is easy to set up for heavy braking applications such as material working, material handling, and hoisting.

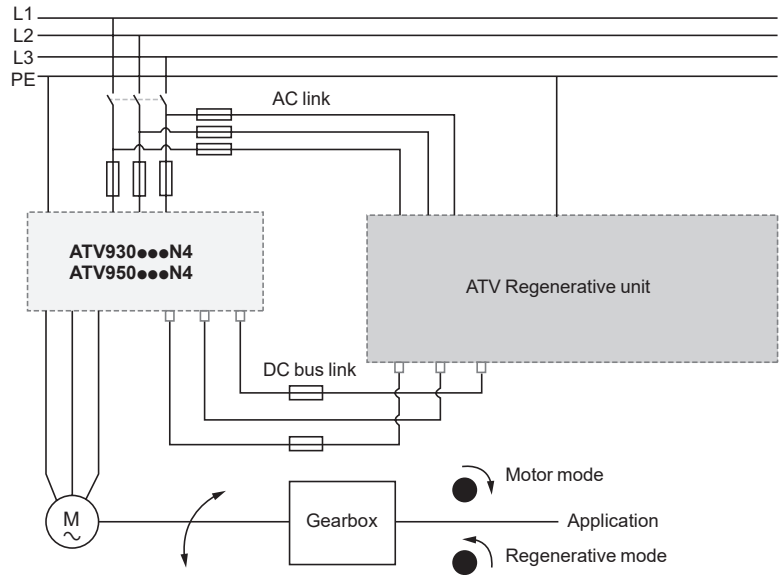

This option is associated with Altivar ATV930●●●N4 and ATV950●●●N4 drives. The harmonics performance of the braking unit is the same as for standard drives.

Features:

- Chemical class 3C3 conforming to IEC/EN 60721
- Mechanical class 3S2 conforming to IEC/EN 60721
- -10..50 °C/14...122 °F without derating, up to 60 °C/140 °F with derating
- Built-in EMC filter compliant with standard IEC 61800-3

Applications

Circuit breaker/contactor/drive combinations help to ensure continuity of service in the installation.

The type of circuit breaker/contactor coordination selected can reduce maintenance costs in the event of a short-circuit on the drive input by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide coordination according to the drive rating.

The drive controls the motor, provides a monitoring function against short-circuits between the drive and the motor, and helps protect the motor cable against overloads. Overload monitoring is provided by the drive's motor thermal monitoring function if this has been enabled. Otherwise, an external monitoring device such as a probe or thermal overload relay must be provided.

Selecting short-circuit protection devices (fuses or circuit breakers) is key to helping to protect the overall installation against potential damages due to short circuits. It is recommended that you refer to the "EcoStruxure™ Motor Control Configurator" and [Installation Manual](#) for more information.

Altivar Process Modular Standard

Altivar Process Modular Standard Reduced Height

Altivar Process Modular Low Harmonic/Regen

General presentation of the offer

Altivar Process drives for cabinet integration offer a cost-effective solution for installation into cabinets and separate enclosures thanks to their compact and robust design. These drive variants simplify cabinet design and allow quick installation and commissioning. Altivar Process also offers a range of low harmonic drives.

Altivar Process Modular concept

Altivar Process Modular is ready to build into cabinets to create high power drive solutions with minimum dimensions that withstand harsh environments.

A powerful drives range from 75 kW/125 HP up to 1800 kW/2500 HP at 400 V supply voltage and up to 2600 kW/2600 HP at 690 V supply voltage can be created by combining sub-assemblies and accessories such as power modules, braking units, control units, options, and mechanical accessories.

Altivar Process Modular brings a new approach where sub-assemblies are used to build drives locally:

- A power module section to be combined in different drive architectures
- Control units that make the family differentiation of the power architecture between ATV600 and ATV900 drives
- Optional kits and accessories for easy enclosure integration

Optimized cabinet design

The Altivar Process Modular drives offer has been developed to reduce the engineering time required to design cabinet-mounted drives solutions, consequently decreasing the time to market and the cost of the solution.

Altivar Process Modular brings flexible solutions for special integration constraints with IP21/IP54 protection and robust design with two offers:

- Standard: integration in 2 m/6.56 ft height and 600 mm/23.62 in. depth cabinets
- Reduced Height: integration in 1.6 m/5.25 ft height and 600 mm/23.62 in. depth cabinets

Altivar Process Modular Liquid-cooled modules allow installation in cabinets up to IP66 protection for harsh environmental conditions.

These power-intensive drives offers integrate:

- Drive power and control modules
- Line chokes to limit THDi levels for standard version and less than 3% THDi for Low Harmonic/Regen version
- A filter to help protect the motor against the effects of dv/dt
- Accessible terminals to simplify the motor wiring and power wiring

IP21 (UL Type 1) integration creates a common cooling air flow for the power and control sections.

The IP54 (UL Type 12) mechanical option introduces a system for separating the cooling air flow between the power and control sections, allowing operation in a highly polluted environment as well as optimum management of thermal stress in the plant room. Both designs allow a maximum incoming air temperature of 50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

Power module and power fan inside drawer

Product features

The Altivar Process Modular drives offer has been developed to meet the requirements of some of the most demanding applications and enclosure requirements and the most recent standards and regulations.

Compliance with electromagnetic compatibility requirements has been incorporated into the design of the modular process drives, which simplifies installation and provides an economical means of helping to ensure equipment meets marking requirements.

- Altivar Process Modular drives have category C3 EMC filters and highly efficient integrated motor filters for dv/dt and common mode reduction and voltage peak limitation that allow 300 m/980 ft of shielded motor cables (category C3 environment) and 500 m/1,640 ft of unshielded motor cables (category C4 environment).
- THDi \leq 48% for 80 to 100% load, which is used to maintain an optimum power factor on the most common operating range
- Embedded line choke technology complying with standard IEC 61000-3-12
- Prewired electric core components tested by Schneider Electric laboratories and test centers
- Sinus filter option: contact your local Schneider Electric sales office for support.

Simple maintenance

Altivar Process Modular drives can significantly cut downtime of your assets by means of easily replaceable core components:

- Same power module with optimized weight and wheels for standard drives for all power ranges
- Same power fan inside a drawer accessible from the front face for all power modules
- Spare parts designed for easy and fast intervention in the field

Liquid-cooled drives

Altivar Process Modular Liquid-cooled drives for cabinet integration offer a modular high power solution for installation into cabinets and separate enclosures. Thanks to the optimized liquid-cooling concept, these drives are suitable for operation in a very harsh environment. The integrated liquid cooling allows optimal dissipation of the heat losses and therefore optimizes the encapsulation of the whole electrical drive unit.

The liquid-cooled modules are designed for 6- or 12-pulse supply as standard.

Altivar Process Modular Liquid-cooled

Low Harmonic/Regen drive

2-level technology

3-level technology

4-quadrant technology

Braking unit module

Product features (continued)

Low Harmonic/Regen drives

Low Harmonic/Regenerative drives are used when drives need to generate particularly low harmonics on the mains.

In addition, Low Harmonic/Regen drives are capable of feeding energy back to the mains, enabling a 4Q operation and improving overall application efficiency.

In comparison with commonly-used 2-level AFE (active front end) architectures, the 3-level technology of Altivar Process Modular Low Harmonic/Regen drives allows this new technology to reach a total distortion factor (THDi) of around 2% and thus fulfills the requirements of standard IEEE 519 for a THDi < 5% in case of distorted mains. Additionally, the $\cos \Phi \approx 1$ in each load situation (from 30 % Pn) helps to reduce the line supply load.

The Low Harmonic/Regen drives range is an optimum solution for energy efficiency and process optimization.

Device features

Enhanced motor service life due to the 3-level concept

The 3-level AIC (active infeed converter) technology reduces the voltage load at the motor significantly, compared with other low harmonic frequency inverters. The fluctuating adaptation of the DC link voltage helps to extend the motor service life.

Reduced losses due to the 3-level concept

In comparison with the traditional circuit structure of active mains rectifiers, the switching frequency is increased and the current load is reduced at the same time when using 3-level technology.

Compact dimensions due to the 3-level concept

A significant advantage of the 3-level technology is the reduced size of the integrated filter. Due to the increased switching frequency and its location inside the forced cooling air channel, the dimensions of the filter can be almost halved.

Braking units

Same integration process as standard power module

Braking units and standard power modules have the same frame and size. They use the same integration kits and DC bus bar kits.

Compliant with standard and LH/Regen drives

Braking units can be built for both standard APM drives and Low Harmonic/Regen APM drives (up to three power modules architectures).

Compliant with any APM integration type

- Standard integration in 2 m/6.56 ft high cabinets
- IP21/UL Type 1 with a common cooling air flow
- IP54/UL Type 12 with a separate cooling air flow

Advanced functions

- With Standard drives:
 - Full braking torque also in overload range
 - Shortening and monitoring the deceleration time, for long travel applications, for example
 - Temporary regenerative load, such as for hoist applications
- With LH/Regen drives:
 - Braking operation when energy regeneration is not possible

Variable speed drives

Altivar Process ATV900

Drives for integration

Altivar Process Modular Standard architecture from 1 to 6 modules

Altivar Process Modular Low Harmonic/Regen architecture from 1 to 6 modules

Normal duty and Heavy duty modes

Drive products for integration

Drive products for integration can be used for optimizing space when integrated inside cabinets. They cover motor power ratings from 0.75...90 kW/1...125 HP for 380...480 V three-phase voltages.

Three-phase power supply - 380...480 V (-15...10%)

Motor power	Degree of protection	Reference
0.75...22 kW 1...30 HP	IP20	ATV930U07N4Z...D22N4Z
30...90 kW 40...120 HP	IP20	ATV930D30N4Z...D90N4Z

Modular drives, based on APM (Altivar Process Modular)

Modular drives solutions can be built using power modules, control units, and accessories. They cover motor power ratings from 75...2600 kW/125...2600 HP for 380...690 V three-phase voltages.

The APM drive references given in this catalog are representative of the operational drives that can be built with the APM offer. These operational drives must be integrated in a cabinet through an APM partner or through the integration services from Schneider Electric. Please contact your local Schneider Electric representative for more information on the local APM network and/or to get a quotation for an integrated APM drive.

Altivar Process Modular variable speed drives are designed for use in two operating modes that can optimize the drive nominal rating according to the system constraints:

- Normal duty (ND): Dedicated mode for applications requiring a slight overload up to 120% with a motor power no higher than the drive nominal power
- Heavy duty (HD): Dedicated mode for applications requiring a significant overload up to 150% with a motor power no higher than the drive nominal power derated by one rating

- (1) These values are given for use in continuous operation with a nominal switching frequency of 4 kHz (ATV930U07N4Z...D45N4Z). The switching frequency is adjustable from 2...12 kHz (ATV930U07N4Z...D45N4Z). Above the nominal switching frequency, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, nominal drive current should be derated according to the derating curves available in the [Installation Manual](#).
- (2) Typical value for the indicated motor power and for the maximum prospective line Isc.
- (3) Values given for applications requiring a slight overload (up to 120%).
- (4) Values given for applications requiring a significant overload (up to 150%).
- (5) For applications requiring Type 12 ready-to-use, add "U" at the end of the reference (ATV●●●N4ZU).

ATV930D55N4Z...D90N4Z	VW3A47805	–

(1) These values are given for use in continuous operation with a nominal switching frequency of 4 kHz (ATV930U07N4Z...D45N4Z). The switching frequency is adjustable from 2...12 kHz (ATV930U07N4Z...D45N4Z).

Above the nominal switching frequency, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise.

For continuous operation above the nominal switching frequency, nominal drive current should be derated according to the derating curves available in the [Installation Manual](#).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Values given for applications requiring a slight overload (up to 120%).

(4) Values given for applications requiring a significant overload (up to 150%).

(5) These drives are IP00 at the bottom terminals for power connection.

(6) For applications requiring Type 12 ready-to-use, add "U" at the end of the reference (ATV...N4ZU).

- (1) Integrated motor chokes allowing a shielded motor cable length up to 300 m/984 ft in category C3.
- (2) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation. The switching frequency is adjustable from 2 to 4.9 kHz for all ratings. Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current. Contact your APM partner for more information.
- (3) Typical value for the indicated motor power and for the maximum prospective line Isc.
- (4) These references are built by combining sub-assemblies and accessories that are integrated by Altivar Process Modular Program members. Contact your APM partner for more information on possible single drive architectures.

Note: Altivar Process Modular Standard drives can be designed as Reduced Height versions for integration in cabinets with a height of 1.6 m/5.25 ft. Contact your APM partner for more information.

(1) Integrated motor chokes allowing a shielded motor cable length up to 300 m/984 ft in category C3.
 (2) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation. The switching frequency is adjustable from 2 to 4.9 kHz for all ratings. Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current. Contact your APM partner for more information.
 (3) Typical value for the indicated motor power and for the maximum prospective line Isc.
 (4) These references are built by combining sub-assemblies and accessories that are integrated by Altivar Process Modular Program members. Contact your APM partner for more information on possible single drive architectures.

(1) Integrated motor chokes allowing a shielded motor cable length up to 300 m/984 ft in category C3.
 (2) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation. The switching frequency is adjustable from 2 to 4.9 kHz for all ratings. Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current. Contact your APM partner for more information.
 (3) Typical value for the indicated motor power and for the maximum prospective line Isc.
 (4) These references are built by combining sub-assemblies and accessories that are integrated by Altivar Process Modular Program members. Contact your APM partner for more information on possible drive architectures.
 (5) APM-L architecture is ready for 12-pulse supply which allows a THDi ≤9%.

Engineered Drive Systems

Altivar Process Drive Systems offer extensive flexibility for customers from different segments and for various applications.

Several solutions are available depending on customer requirements.

Configured to order (CTO)

Configured Drive Systems (CTO) can be quickly customized to fit your requirements via our [Altivar Process Configurator Tool](#).

Thanks to pre-defined CTO options, the CTO variant significantly reduces the delivery time for individually adapted drives, ready to connect.

The available CTO options are:

- Increased IP54 protection rating
- Enclosure plinth for basic device
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting and heating
- "Local/remote" key switch
- Ethernet port on front door
- Digital and analog I/O modules and relay output modules
- Communication modules for various fieldbus systems
- STO - SIL 3 Stop category 0 or 1 Emergency stop
- Front display module (FDM)
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker
- Motor for circuit breaker
- Automated mains disconnect
- Setting for 415 V + 10%
- Safety labels in the local language
- Design for IT mains
- Seaworthy packaging
- Braking unit (BUO)

Outdoor design

Multipulse design

Multidrive

Engineered Drive Systems (continued)

Engineered to order (ETO)

Our experts help you to find an effective Drive Systems (ETO) solution for your application. Starting from the integration of small drives up to individual enclosure design for harsh environments.

Enclosure modifications

- Different enclosure types
- Drives with reduced enclosure dimensions
- E-house integration
- Special colors
- Customer branded solutions
- Design for marine, automotive, and special applications
- Etc.

Cooling adaptations

- Separate air flow
- Connection to cooling channels
- Liquid-cooled drives
- Outdoor installations for harsh environments
- Different protection ratings
- Etc.

Electrical adaptations

- AC or DC multidrive
- Bypass solutions
- Multipulse or Active Front End (AFE)
- Various motor protection solutions
- Adaption to individual mains conditions
- Braking and regenerative solutions
- Etc.

To inquire about your individual drive solution, contact your local Schneider Electric drives expert or consult our [Customer Care Teams](#).

Presentation

Concept

The ATV960 High Performance Drive Systems range offers standard enclosures ready to connect.

The modular system concept with more than 80 selectable options makes it possible to adapt the enclosure unit optimally to individual requirements.

The fully-tested, ready-to-connect enclosure allows quick drive installation and commissioning.

Power versus overload

For optimum adaptation to the application you can choose between two overload modes:

- Normal duty: High continuous power with an overload capability of 20% (for compressors, displacement pumps, blowers, etc.)
- Heavy duty: Reduced continuous power with an increased overload capability of 50% for 60 s for drives with enhanced requirements regarding overload capability, starting torque, load impacts, and control performance (such as mixers, crushers, mills, conveyors, etc.)

Standard equipment

The standard equipment contains frequency inverter modules, semiconductor fuses, a main switch, a line reactor to reduce the harmonics, a motor choke to limit overvoltage on the motor due to long cables, and spacious mains and motor bars for connecting the power cables.

The design is based on the standard enclosure system "Spacial SF" with a graphic operating panel integrated into the enclosure door.

Compact dimensions

Inside the enclosure there is an easily accessible and spaciouly designed control panel with the control components. Despite its compact dimensions, the enclosure has enough space for additional extensions and is easily accessible for maintenance purposes.

Device features

High motor performance

Optimum control over the motor in each operating state due to the new motor control method of the ATV960 High Performance Drive Systems.

- Asynchronous motors (all efficiency classes, high number of poles)
- Synchronous motors (PM motors, torque motors, reluctance motors)
- Special motors for submersible pumps

Extended connectivity

Integrated dual Ethernet as standard provides increased redundancy and supports RSTP (Rapid Spanning Tree Protocol).

Dynamic drive-to-drive communication for multi-motor drives with master/slave groups and optimum load sharing between all motors.

Cooling concept

The power section components are cooled in a separate cooling air channel. About 90% of the heat losses are evacuated via this channel. The inside of the enclosure is cooled via fans in the enclosure door.

When using the "increased IP54 protection" rating option, the separate air supply for the power section comes through the enclosure plinth.

Variable speed drives

Altivar Process ATV900

High Performance Drive Systems

4

IP23 enclosure

IP54 enclosure

Protection ratings

The standard design of Altivar Process High Performance Drive Systems complies with IP23 protection. This solution provides optimum cooling of the built-in frequency inverter modules and power components as well as maximum compactness.

For operation in harsh ambient conditions, increased IP54 protection is available as an option. This solution consists of a clearly specified and tested cooling system with a separate cooling air channel, which provides excellent reliability.

About 90% of the heat losses are evacuated via the separate cooling air channel. The inside of the enclosure is cooled via fans located in the enclosure door.

Standard IP23 enclosure design

In order to avoid internal air short-circuits, the power sections of the components are located in the main cooling air channel.

The cooling air intake comes from a grid located in the bottom of the enclosure door. The internal fan, which is in a separate air channel, provides cooling of the power section. The air then comes out through the top of the enclosure.

The heat losses from the control section are evacuated by a fan in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP23 enclosures comprise:

- 1 An air intake (without filter mat) via a grid on the bottom of the enclosure door
- 2 A line reactor
- 3 Fans for the power section
- 4 A rectifier module
- 5 An inverter module
- 6 A dv/dt filter choke
- 7 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 8 An air outlet (without filter mat) with fans for the control section

Increased IP54 protection rating

With increased IP54 protection with separate channels, the cooling air intake comes from the floor and goes out through the enclosure roof.

The control section is cooled by filter fans located in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP54 enclosures comprise:

- 9 An air intake for the power section via the enclosure plinth
- 10 A line reactor
- 11 Fans for the power section
- 12 A rectifier module
- 13 An inverter module
- 14 A dv/dt filter choke
- 15 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 16 An air outlet (with filter mat) with fans for the control section
- 17 An air intake grid (with filter mat) for the control section

Additional enclosure allowing cabling from the bottom

Modular offer

This consists of:

- The standard High Performance offer
- One or more options (see [pages 4/16 to 4/19](#))

Options (CTO)

Some of these options depend on the drive rating. They can be integrated without any need for modifications to the enclosure:

- Increased IP54 protection rating
- Enclosure plinth for basic device
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting and heating
- "Local/remote" key switch
- Ethernet port on front door
- Extended I/O modules and extended relay modules
- Communication modules for various fieldbus systems
- Encoder interface modules
- STO - SIL 3 Stop category 0 or 1 Emergency stop
- Front display module (FDM)
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker
- Motor for circuit breaker
- Automated mains disconnect
- Setting for 415 V + 10%
- Safety labels in the local language
- Braking unit (BUO)

Further design variations (ETO)

These adaptations depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Modified wiring colors
- Remote monitoring
- Different ranges of supply voltages
- Multipulse supply (12-pulse)
- Design without a main switch
- Increased short-circuit strength up to 100 kA
- Air intake from the back
- Other enclosure colors
- Customized documentation and labeling
- Motor contactor
- Etc.

(1) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation.

The switching frequency is adjustable from 2...8 kHz for all ratings.

Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see the derating curves in the Handbook).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Values given for applications requiring a slight overload (up to 120%).

(4) Values given for applications requiring a significant overload (up to 150% for 60 s).

Note: Consult the CTO options tables of possible combinations with the drives (see page 4/16).

Presentation

Concept

The ATV980 Regenerative Drive Systems help improve efficiency by feeding the drive energy back to the mains.

Schneider Electric has developed a concept based on a 3-level technology that reduces the total current distortion factor (THDi) to a value below 5% and allows energy to flow in both directions at the same time.

During the development of the enclosure system, special attention was paid to make installation and operation simple. The result is a ready-to-connect enclosure for drives for which generator operating states can occur. This provides a 4-quadrant drive solution with smooth changeover from motor operation to generator operation.

The modular system concept with more than 80 selectable options makes it possible to adapt the enclosure unit to individual requirements. The fully-tested, ready-to-connect enclosure allows quick drive installation and commissioning.

Standard equipment

The standard Regenerative offer contains 3-level active infeed modules as well as frequency inverter modules, filter components, semiconductor fuses, a main switch, a dv/dt filter to limit impact of dv/dt and overvoltages in the motor due to long cables, and spacious mains and motor bars for connecting the power cables.

The design is based on the ready-assembled Sarel "Spacial SF" enclosures with a graphic operating panel integrated in the enclosure door.

Inside the enclosure there is a spaciouly designed control panel with the control components. Despite its compact dimensions, the enclosure has enough space for additional extensions and provides easy access for maintenance purposes.

4-quadrant technology

3-level technology

Device features

Simple use

ATV980 drives pilot and stop each motor without any additional effort. This 4-quadrant (4Q) technology is an ideal solution for drives for which generator operating states can occur. This avoids having complex multi-drive solutions.

Energy savings by highly efficient power regeneration

The 3-level technology inside the active mains rectifier and the dynamically adapted DC link voltage help to ensure an efficient flow of energy to and from the mains. ATV980 Drive Systems therefore help to save electrical energy.

Reduced load of the mains 3-level concept

In comparison with the conventional circuit structure of active mains rectifiers, the 3-level technology allows the switching frequency to increase and the current load to be reduced at the same time.

This new technology achieves a total distortion factor (THDi) below 2% and thus fulfills the requirements of the IEEE 519 standard. The THDi is below 5% for distorted mains.

Additionally, the cosine Phi is equal to 1 in each load situation (from 30 % Pn), helping to reduce the the load on the mains.

Protection ratings

The standard design of the Altivar Process Regenerative Drive Systems complies with IP23 protection. This solution provides optimal cooling of the built-in frequency inverter modules and power components as well as maximum compactness.

For operation in harsh ambient conditions, increased IP54 protection is available as an option. This solution consists of a clearly specified and tested cooling system with a separate cooling air channel, which provides good reliability.

About 90% of the heat losses are evacuated via the separate cooling air channel. The inside of the enclosure is cooled via fans located in the enclosure door.

IP23 enclosure

Standard IP23 enclosure design

In order to avoid internal air short-circuits, the power sections of the components are located in the main cooling air channel.

The cooling air intake comes from a grid located in the bottom of the enclosure door. The internal fan, which is in a separate air channel, provides the cooling of the power section. The air then comes out through the top of the enclosure.

The heat losses from the control section are evacuated by a fan in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach 50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP23 enclosures comprise:

- 1 An air intake (without filter mat) via a grid on the bottom of the enclosure door
- 2 Filter components
- 3 Fans for the power section
- 4 An active front end (AFE) module
- 5 A dv/dt filter choke
- 6 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 7 An air outlet (without filter mat) with fans for the control section

IP54 enclosure

Increased IP54 protection rating

With increased IP54 protection with separate channels, the cooling air intake comes from the floor and goes out through the enclosure roof.

The control section is cooled by filter fans located in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach 50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP54 enclosures comprise:

- 8 An air intake for the power section via the enclosure plinth
- 9 Filter components
- 10 Fans for the power section
- 11 An active front end (AFE) module
- 12 A dv/dt filter choke
- 13 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 14 An air outlet (with filter mat) with fans for the control section
- 15 An air intake grid (with filter mat) for the control section

Enclosure heating

Modular offer

This consists of:

- The Low Harmonic/Regen Drive offer
- One or more options (see [pages 4/16 to 4/19](#))

Options (CTO)

Some of these options depend on the drive rating. They can be integrated without any need for modifications to the enclosure:

- Increased IP54 protection rating
- Enclosure plinth for basic device
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting and heating
- "Local/remote" key switch
- Ethernet port on front door
- Extended I/O modules and extended relay modules
- Communication modules for various fieldbus systems
- Encoder interface modules
- STO - SIL 3 Stop category 0 or 1 emergency stop
- Front display module (FDM)
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker
- Motor for circuit breaker
- Automated mains disconnect
- Setting for 415 V + 10%
- Safety information labels in the local language
- Braking unit (BUO)

Further design variations (ETO)

These adaptations depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Modified wiring colors
- Remote monitoring
- Different ranges of supply voltages
- Design without a main switch
- Increased short-circuit strength up to 100 kA
- Air intake from the back
- Other enclosure colors
- Customized documentation and labeling
- Motor contactor
- Etc.

Index

- Product reference index..... [page 5/4](#)

Variable speed drives and soft starters

A whole world of Services for your drives and soft starters by Schneider Electric

Support and services offer by Schneider Electric

Variable speed drives and soft starters are an important part of your operation, with downtime having a significant impact on your business. Protecting that investment through comprehensive services means that you can continue to deliver optimally throughout the lifecycle of your drive and soft starter. Our range of services is designed to help you get more out of your drives and soft starters, your operation, and to improve your environmental impact.

5

Install

- **Extended Warranty** service helps you control your maintenance costs. Schneider Electric will provide a replacement drive and soft starter or repair the product on site during a period of one or three years more than the standard warranty, in all conditions covered by the extended warranty.
- **Start-up** service is the first essential step in maintenance and optimal operational performance of the drive or soft starter. Our comprehensive review checks up to 100 parameters and is especially designed for drives and soft starters in simple applications.
- **Commissioning** service ensures a reliable start for operations with more complex applications and drive systems. The unique requirements of your process need to be carefully considered to ensure efficient operations.

Operate

- **Preventive Maintenance** service performs predetermined maintenance actions according to a product-specific schedule. The work is carried out by certified technical experts following Schneider Electric instructions. This service minimizes unplanned downtime and extends your equipment lifetime.
- **Remote Technical Support** brings you expert product assistance over the phone, email, chat, or web for any technical questions relating to your drives and soft starters, including configuration, diagnostics, and maintenance. Our global support team is multi-lingual with support available up to R&D level experts if needed.
- **On-Site Expert Assistance** service offers you highly skilled field service experts to troubleshoot and resolve drive or soft starter equipment-related matters at your site, as a back-up source of expertise for your personnel.
- **Spare Part Management** service identifies and manages your critical spare parts either on your site or offsite. This service ensures that you have access to the spares you need without having to invest in capital to maintain the stock.

(1) Services available in countries that have the right structure and capabilities.

Variable speed drives and soft starters

A whole world of Services for your drives and soft starters by Schneider Electric

Support and services offer by Schneider Electric (continued)

Optimize

- **Training** service offers eLearning, classroom, and onsite training provision to enhance the technical installation, commissioning, and maintenance competencies of your personnel. Added competence translates into further process efficiency and reliability, as well as employee satisfaction.
- **EcoStruxure Asset Advisor** service enables you to move from reactive to predictive maintenance and access actionable insight provided by the advisor. The service predicts drive- and motor-related actions through connected devices and advanced algorithms monitored by Schneider Electric's experts.

Renew

- **Drive Revitalization** is an excellent choice if you prefer to use your aging drives longer and want to extend their service life with affordable and comprehensive inspection and replacement of all critical parts.
- **Drive and soft starter replacement** involves modernizing equipment by replacing the previous aged or obsolete product with a new one matched to the purpose. The service can be extended with engineering in case the device and process requires more advanced engineering.

Circular economy

- **Spare Parts** are available from our local, regional, and global stocks. Original equipment parts from Schneider Electric are reliable and easily available. They will help to keep your product in operation for longer.
- **Repair** allows you to extend the life of your drive or soft starter. The affected product can be replaced, or repaired on site or at our repair centers, depending on the type of product in question.
- **Fast Exchange by refurbished drive or soft starter (1)** gives a second life to inoperative drives or soft starters. In this case, we offer an immediate exchange with a replacement refurbished drive or soft starter and take back the product, repair it, and keep it ready for the next exchange.
- **Take-back and recycling (1)** is the last step to improve your environmental impact. Unrepairable products are dismantled, raw materials are collected and given a second life. Up to 85% of the product components can be recycled.

Service contracts secure recovery, availability, and outcome

Service contracts manage the safety and performance of your assets through well-defined maintenance plans tailored to your operational needs. The predefined service contract – Advantage Service Plan – and fully customizable “à la carte” service contract are built from the services in the “Operate” and “Optimize” phases and service levels defining availability, response, and lead times matching your particular needs. You will enjoy priority access to Schneider Electric support when you need it, as well as having an expert partner to plan the long-term evolution of your drives and soft starters.

mySchneider app

With the mySchneider app you have easy 24/7 access to product information and expert support. All registered users have access to additional features, such as real-time notifications, order tracking, product pricing, and availability. The mySchneider app is available for download from the IOS and Android app store.

Schneider Electric – helping you succeed

Schneider Electric, the leader in digital transformation of energy management and automation, has operations in more than 100 countries. With this global footprint we have certified field service representatives, regional expert and advanced level support up to product R&D to provide you the right support across the lifecycle of your drives and soft starters. Furthermore, we offer an extensive network of local and global repair centers and a logistics chain that underpins our ability to respond to your needs.

To order services or find out more, please contact your local Schneider Electric service center.

(1) Services available in countries that have the right structure and capabilities.
