RS PRO Pack of 10 USB Port Blockers

Stock number: 2355197

EN

The RSPRO pack of 10 USB port blockers are designed to be used in conjunction with our RSPRO USB Port Block Key with 4 Port Blockers.

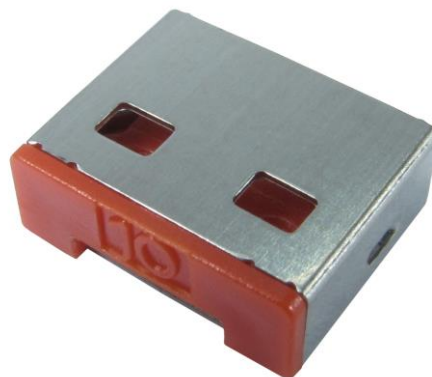

Port blocker key not included.

USB port blockers are designed to deny access to any USB socket. These can be in officers and schools where you want to restrict access to USB ports to prevent damage or access to the computer via flash drives, USB hard drives and other USB peripherals.

Our USB port blockers can also be used to stop the delivery of viruses, keyloggers and other malicious programs being loaded onto the computer or server via a USB port.

- Insert lock into a USB port with the key
- Squeeze the side buttons and pull out

To remove the lock, insert the key into the USB lock and pull out without squeezing the side buttons. Once the blocker is in place it will be very difficult to remove without damaging the USB port unless you have the key.
