

FEATURES

- **Stainless steel welding wire**
- **Used for the metal inert gas (MIG) welding process**
- **Wire diameter of 0.8 mm**
- **M8 thread**
- **Spool weight of 0.5 kg**
- **Conforms to NSI/ESD S20.20:2014 and BS EN 61340-5-1:2007 Electrostatic Control Standards**

RS PRO Stainless Steel Wire 0.8mm Diameter

RS Stock No.: 182-8786

RS Professionally Approved Products bring to you professional quality parts across all product categories. Our product range has been tested by engineers and provides a comparable quality to the leading brands without paying a premium price.

Product Description

This welding accessory from the RS PRO range is suitable for the metal inert gas (MIG) welding process. Stainless steel wire is suitable for welding sheet metal in industries such as automobile and aircraft manufacturing. MIG welding is a process that joins two materials together using a solid wire electrode through a welding gun and into the weld pool. A shielding gas such as argon is sent through the welding gun, protecting the weld pool from contamination. Stainless steel is used in this process as it forms a long-lasting, reliable weld that doesn't rust easily. This wire has a diameter of 0.8 mm and the spool weighs 0.5 kg.

General Specifications

Accessory Type	Stainless Steel Wire
For Use With	MIG Welding Process
Application	Automobile and aircraft manufacturing.

Mechanical Specifications

Wire Diameter	0.8mm
Weight	0.5kg
Wire Length	273.5m

Approvals

Standard Mets	ANSI/ESD S20.20:2014 and BS EN 61340-5-1:2007
