

## FEATURES

- Low Noise
  - Input Offset Voltage
  - Low Offset Voltage Drift
  - Very High Gain
  - Outstanding CMRR
  - Slew Rate
  - Gain Bandwidth Product
  - Industry Standard Pinouts

## APPLICATIONS

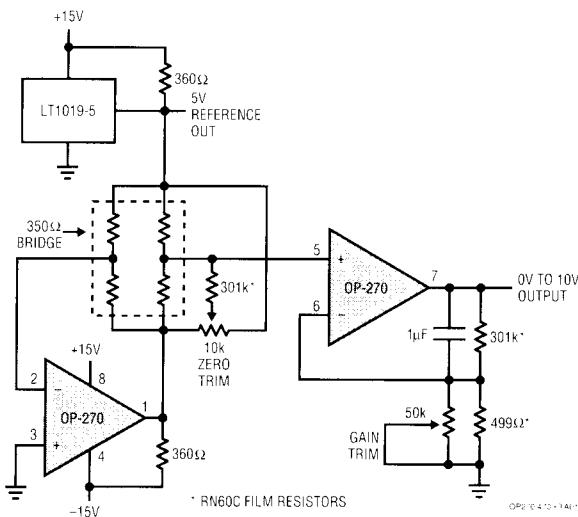

- Two and Three Op Amp Instrumentation Amplifiers
- Low Noise Signal Processing
- Microvolt Accuracy Threshold Detection
- Strain Gauge Amplifiers
- Accelerometer Amplifiers
- Infrared Detectors

## DESCRIPTION

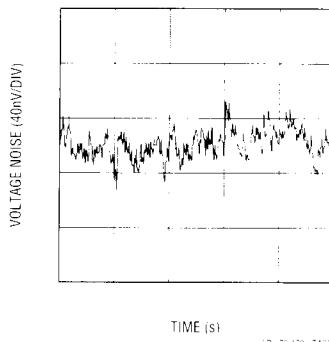

The OP-270 dual and OP-470 quad are high performance op amps with 80nVp-p noise, from 0.1Hz to 10Hz, offering comparable performance to the industry standard OP-27. The OP-270 (OP-470) feature input offset voltage below 75 $\mu\text{V}$  (400 $\mu\text{V}$ ) and offset drift under 1 $\mu\text{V}/^\circ\text{C}$  (2 $\mu\text{V}/^\circ\text{C}$ ), guaranteed over the full military temperature range. Open-loop gain of the OP-270 (OP-470) is over 1.5 million (1.0 million) into a 10k $\Omega$  load ensuring excellent gain accuracy and linearity, even in high-gain applications. Input bias current is under  $\pm 20\text{nA}$  ( $\pm 25\text{nA}$ ) which reduces errors due to signal source resistance. The OP-270's (OP-470's) CMRR of over 106dB (110dB) and PSRR of less than 3.2 $\mu\text{V}/\text{V}$  (1.8 $\mu\text{V}/\text{V}$ ) significantly reduce errors due to ground noise and power supply fluctuations. Power consumption of the dual OP-270 (quad OP-470) is one-third less than two (four) OP-27's, a significant advantage for power conscious applications. The OP-270 and OP-470 are unity-gain stable with a gain bandwidth product of 6MHz and a slew rate of 3.0V/ $\mu\text{s}$ .

For applications requiring higher performance, see the LT1124 and LT1125 data sheets.

**Strain Gauge Signal Conditioner with Bridge Excitation**

**0.1Hz to 10Hz Voltage Noise**

**ABSOLUTE MAXIMUM RATINGS**

Supply Voltage .....	$\pm 18V$
Differential Input Voltage (Note 4) .....	$\pm 1.0V$
Differential Input Current (Note 4) .....	$\pm 25mA$
Input Voltages .....	Equal to Supply Voltages
Output Short Circuit Duration .....	Indefinite

## Operating Temperature Range

OP270A/OP470A ..... -55°C to 125°C

OP270E/OP470E

OP270G/OP470G ..... -40°C to 85°C

## Storage Temperature Range

All Grades ..... -65°C to 150°C

Lead Temperature (Soldering, 10 sec.) ..... 300°C

The ● denotes the specifications which apply over the full operating temperature range.

**Note 1:** This parameter is guaranteed but not 100% tested.

**Note 2:** This parameter is sample tested only.

**Note 3:** This parameter is guaranteed by the CMRR test.

**Note 4:** The inputs are protected by back-to-back diodes. Current limiting resistors are not used in order to achieve low noise. If differential input voltage exceeds  $\pm 1.4V$ , the input current should be limited to 25mA.

**ELECTRICAL CHARACTERISTICS**  $V_S = \pm 15V$ ,  $-40^\circ C \leq T_A \leq 85^\circ C$ , unless otherwise noted.
