Aluminium Rectangle Bar

[RS Stock No. 446-6757](#)

Aluminium bar as defined by the Aluminium Association is a solid wrought product that is long in length in relation to its small cross sectional dimensions, for which the greatest perpendicular distance between parallel faces is not less than 0.375 inch. The cross sectional shape may be:

- Square, or rectangular (excluding plate and flattened wire) with sharp or rounded corners or edges, or
- a regular hexagon or octagon.
