

## Y6020 Electric grease pump

Drum electric grease pump can be connected with battery (DC-24V) of the engineering machinery, easy to use, the output pressure is high, the output is adequate. As the special products of excavator, it's economic enough when repairing the engineering machinery. Widely used in ports, mines, steel mills stone field, garages, specialized in the field of manufacturing production line and so on many products. 220V Drum electric grease lubrication pump can be inserted into the grease barrel directly in the workshop without air source, so as to prevent oil from the oil into the machine barrel, more easy and convenient to use.

### Application:

For high viscosity grease injection.

Suitable for all kinds of power machine grease injection especially in Mining area, building area, earth moving area.

Power supply AC220V/DC24V/DC12V

Barrel capacity: 20-30L

Output capacity : 0.6L/min

Output pressure : <350kg

Grease range: NLGI 000#~00#3

Weight : 25kg

Drum inner diameter : 280-320mm
