

Features

1

Reflective tape on the wrist and high visible color provides high visibility and safety during daytime and night working.

3

Dual Kevlar® threads (cut resistant) stitching provides better abrasion resistant ability and longer service life than normal Nylon threads.

5

As the wearer continuously grasps the object, the reinforcement design between thumb and index finger part significantly improve service life of the vulnerable part, and the non-slip special texture with level 4 abrasion resistant will be used on the reinforcement.

7

Cuff puller on the wrist helps wear your glove in proper position faster and quickly.

2

Multiple 3D S-Flexible rubber design of hand back provide maximum protective area up to 90% which greatly maximize its anti-impact ability to external kinetic energy.

4

The palm is completely oil-resistant (sewing stitching needle excluded) and has a special 3D texture with non-slip oil-resistant fabric in level 4 abrasion resistant (highest abrasion resistant level in CE rate) which makes the glove has the best handling when it contact with oily or slippery objects.

6

Cut resistant material layer inside of the palm provide it CE EN388 level 5 cut resistant and ANSI level 5 cut resistant ability.
