**Stock No:**

# RS Pro Steel Zinc Plated O Clips

The RS Pro range of double ear O clips also known as lemon clips, 2 ear clips or double ear clips come in a range of sizes starting with a 5mm minimum diameter to 27mm maximum diameter, starting from a 6mm band width to 10mm.

**Typical Applications:**

Often used for maintenance and OEM applications.

Suitable for applications involving air, fluid, gas and steam hoses of rubber or plastic, and co-axial and other electrical cable.

Also suitable for low pressure hydraulic applications.

**Installation Tips:**

Requires closing pincers to install and remove. Both standard closing and side closing pincers can be used or alternatively cable cutters as a matter of course.

To install close one ear fully, the first ear is then closed so the first ear can open slightly. This will build resilience strength allowing the clamp to hold against shrinkage, pressure and vibration caused by wear and tear and temperature changes.

Use side closing pincers if access to ear is limited.

Our range of O clips are also available in Stainless Steel or in a 200 piece Steel O Clip kit by ordering part no: 292524.
