

RS PRO Photoelectric Time Of Flight Sensors with IO-Link communication

Description

The 2377274/2377275 stainless steel sensors are built with high-quality materials and designed for harsh environments.

They are designed for use in environments where high-pressure cleaning, cleaning agents and disinfectants are used on a daily basis.

The strong stainless steel (AISI316L) together with high-quality plastic materials like PEEK, PPSU, and PES sealings of FKM ensure a safe and excellent mechanical resistance.

The sensor housing has the IP69K rating as well as approval by ECOLAB for cleaning and disinfection agents.

The compact sensor design is ideally suited to confined spaces.

Benefits

- **Long range Background suppression** TOF (Time of Flight) sensor with IO-Link with a adjustable distance of 50 to 1.000 mm, either by potentiometer or via IO-Link.
- **Infrared laser class 1** assure a reliable detection.
- **Easy customization** to specific OEM requests by use of the build in IO-Link functionalities.
- **The output can be operated** either as a standard switching output or in IO-Link mode.
- **Fully configurable via output IO-Link v 1.1.** Electrical outputs can be configured as PNP / NPN / Push-Pull / External input, normally open or normally closed.
- **Timer functions** can be set, such as ON-delay, Off-delay, and one shots.
- **Logging functions:** Temperatures, detecting counter, power cycles and operating hours.
- **Detection modes** Single point, two point and windows mode.
- **Logic functions:** AND, OR, XOR and Gated SR-FF.
- **Analogue output:** In IO-Link mode the sensor will generate 16 bit analogue process data output representing the distance to the object.

IO-Link

Applications

- The sensor has multiple detects functions e.g. in single point mode the presence or absence of objects are detected while cutting off the background information.
- The detection distance is very independent of the colour of the objects to be detected.
- The "analogue" distance from the sensor to the object is available via the IO-Link communication.

Main functions

- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.

- Adjustable parameters via IO-Link interface:
 - ▶ Sensing distance and hysteresis.
 - ▶ Sensing modes: single point or two point or window mode.
 - ▶ Timer functions, e.g.: On-delay, Off delay, One shot leading edge or trailing edge.
 - ▶ Logic functions such as: AND, OR, X-OR and SR-FF.
 - ▶ External input.
 - ▶ Logging functions: Maximum temperatures, minimum temperatures, operating hours, operating cycles, power cycles, minutes above maximum temperature, minutes below minimum temperature, etc.
 - ▶ Auto hysteresis
