RS Pro Replacement Cable Stripper Blade For Use With Wire Strippers

Product Details

Precision Stripper

A precision cable stripper for the preparation of coaxial and other multi-layer cables up to 10 mm diameter. Consists of three spring loaded individual cutting blades which may be set at independent depths by continuously variable adjustment wheels, so that the different stages of stripping coaxial cable may be precisely controlled. Twelve cable stops are provided (4 mm-15 mm in 1 mm steps) which, when fitted to the tool will determine stripping lengths of braid, dielectric and inner conductor.

Lengths may also be varied or finely adjusted by altering the depth of stop fitting. Once locked in position (locking wheels are provided) a cable may be inserted under each blade, butted against the appropriate cable stop in turn, and a few rotations of the stripper will prepare cable ready for assembly to connectors, terminals, etc. Features include arbitrary scales against the adjustment wheels to give a good indication of blade depth for repeatable operation. Additionally, one side wheel is colour coded, so that sequence of preparation can be easily identified. The centre blade will cut insulation down to a minimum conductor diameter of 1 mm.

A set of 3 spare blades is provided with each stripper.

Additional replacement blades are available separately. Instructions are supplied with each stripper.

Specifications:

Accessory Type	Replacement Blade
For Use With	Wire Strippers
