

PLEASE CHARGE THE BATTERY FIRST BEFORE USE!

Technical specifications

camera		
	Color camera with sapphire glass lens	
	Wide viewing angle	120°
	Illumination	12 white LEDs
	Operating temperature	-20°F ~ 120°F (-28°C ~ 50°C)
	Stainless steel house	Stainless steel 304
	PAL output	720X576(PAL)
	NTSC output	720X480(NTSC)
	Waterproof	IP68
cable		
	Special gold point touch connector to camera	
	Fiberglass cable	
	Cable length : 20m (standard)	50meter (optional)
monitor		
	7" TFT COLOR monitor	Picture Resolution:320 (TV Lines)
	OSD display	
	Video output	1Vpp 75 Ohms
power supply		
	Charge adaptor :110~240VAC ,12.6VDC /1000mA (included.)	
	Lithium battery box (4000mAh, included.)	
Dimensions		
	Case size	□ 48cm x 41cm x 20cm □ 52cm x 43cm x 20cm
	Camera	Ø23mm x 120mm
	Cable	reel Ø32cm

8. Version

Booc.12.11.05 (soft Version)

Press "menu" key enter into main menu to select the playback setting

Event playback

- 1. Video files all recording Video files store inside
- 2. Photo files all snap Photo files store inside
- 3. Audio files all recording audio files store inside
- 4. All files All the file inside of the SD card

Delete files

1. Press “Playback” key to find the files .Press “menu” to Choose the file you want to delete ,one and all, and then press “OK” to delete it.

Specifications

Resolution	D1: 720X576
	High Resolution:720x480
	High Resolution:640x480
Compression format	M-JPEG & Standard JPEG
Video files format	AVI
Working mode	Recording/snap photo/ audio recording
Memory	SD/SDHC card≤32GB
Power	DC12V
Working electricity	≤200Ma
Working temperature	-10 ℃ ~+50 ℃
Working humidity	20%~85%

Basic operation

- 1. **IMPORTANT: When connecting the camera to the Monitor the power must be off .**
- 2. **Screw the camera to the reel cable connect the reel to the Monitor (See Figure 1-B).make sure the camera lens is clean.**
- 3. **Press the switch on the monitor and DVR will work after five seconds.**
Gently insert the camera into a pipe duct, etc and reel out the cable until it is at the desired depth.
IMPORTANT: Avoid kinking the fiberglass cable as this will cause irreversible damage. Do not bend under sharp angles and do not twist the cable.
NEVER use the camera and/or cable as an unclogging tool.
- 4. **adjust the led bright knob to suitable position .**
Press the **MENU** button to enter the setup of the monitor. Move through the setup page using the select button and adjust the values with the **UP** and **DOWN** buttons. Press and hold the **UP** and **DOWN** buttons to increase setting speed. Following values can be set between 0 and 100:

bright-contrast- color –languge-6:9 - 4:3-sleep)

5. To view the images on another screen (not incl.) connect that screen with a video cable (not incl.) to the VIDEO OUTPUT on the control box.
6. After use, switch the power off, carefully retract the camera from the inspection area. Clean the cable and wind it back on the reel. Disconnect all cables and place the protective caps back on the connectors. Make sure the camera and cables are clean and dry before storing them back in the case. Use a clean, soft and dry cloth to clean it .
7. Storage and cleaning
 - Always return the equipment back to its protective case when not in use.
 - Do not close the case with wet equipment inside as this will increase the risk of mould.
 - Clean the rest of the equipment with a clean dry cloth. Never use solvents or abrasive solutions.

OSD Interface Operation

The font and text size are fixed and cannot be changed.

The basic operation of the text overlay unit is straight forward. A flashing underscore cursor indicates the current screen position. This cursor can be moved the screen by the keyboard cursor keys. The cursor will wrap around the screen left and right, top and bottom. If no key is pressed then the cursor will disappear after approximately ten seconds. The video text overlay unit uses the standard US keyboard mapping.

Standard US keyboard mapping used by the video text overlay unit. By default all US units are supplied with this.

The alphanumeric characters in the QWERTY section of the keyboard and the keys of the numeric keypad can be typed directly to the screen as would normally be expected. Each alphabetic character key is normally lowercase. Uppercase characters can be typed by holding down the shift key or pressing the CAPS LOCK key. The keyboard's LED indicators will be lit by the unit. To exit CAPS LOCK mode press the key again.

To remove a character from the screen use the backspace key and delete key. This will replace the character immediately to the left of the current cursor position with a blank space and move the cursor to that position. The Delete

key has no function. The Home and End keys move the cursor position to the left and right of the current line on the screen. The Return key moves the cursor to the beginning of the next line.

The video text overlay unit operates in two modes. In the first mode the text is overlaid over the video input signal. When the video signal is removed the unit automatically switches to generating its own internal dark grey background video signal and will switch back to the external video when this is reconnected. In the second mode the unit generates its own video signal internally, but ignores the external video signal. All keyboard commands operate in the same way in both modes. To switch between modes use the F3 key as shown in the command table below. Each page can have this mode set independently.

Esc	Clear the cursor current settings back to the first line and the first position
F1	the cursor from any page back to the first line and the first position
F2	Select text over internal video
F3	Select text over external video signal
F4	Shift display up
F5	Shift display down
F6	Shift display left
F7	Shift display right
F8	Reset display X-Y position (defaults)
F9	Clear the screen

The video text overlay unit divides its display between four on screen pages. Text written to each of these pages is will be stored in the unit's non-volatile memory until overwritten. There is no default on screen indication of which page is currently selected. To move between the screen pages use the page up and page down keys or Page up moves toward page 1. Page down moves toward page 4. To clear the screen page of text press F9.

Fuse

1. The fuse and fuse cap on battery box are not assembled during shipping, please relocate the fuse with cap to the fuse holder first before use.
2. If the status LEDs on the control box don't light up after switching on the battery box, check the fuse.
 - Turn the fuse cap counter clockwise to remove it from the battery box.
 - Only replace the fuse with a new one with the same specifications as the original one (F2A250V).

Charge the battery

- 1) If the status LEDs on the battery box in lower level, charge the battery. Insert the charge adaptor cord into the battery charge jack. (**Figure 2**)
- 2) Switch to the charge position on control box.
- 3) Charge LED will be red during charging and turn to green when finish charging (normally charging time 6-7 hours).

Figure 2

4) Battery specifications:

- | | | |
|-----------------------------------|------------|--------------------|
| 1. TOTAL POWER | 14W | |
| 2. LITHIUM BATTERY | 12VDC MAX. | ≤ 40Wh |
| 3. CHARGER | 12.6V | 1A |
