### Applications

**Pattern Recognition:** An easy way to verify that a product is manufactured to the specification e.g. Furniture production where tabs or holes has to be with a defined pattern.

**Speed and Length:** Monitor the speed and length of an object on a conveyour for e.g. sorting on size.

**Divider function:** A de-central counting function that gives a signal when a preset count level is reached e.g. when a certain items are packed in a carton box it ask for a new box.

**Object and Gap Monitoring:** Function that can sort out good objects and gaps between them so e.g. a packaging machine only receive objects with the correct size and gaps.

### Main functions

- Detects presence or absence of objects by detecting reflected light energy from the object.
- The sensor can be operated in IO-Link mode once connected to an IO-Link master or in standard I/O mode.
