

Galvanised Steel Form A, DIN 125A Flat Washer

FEATURES

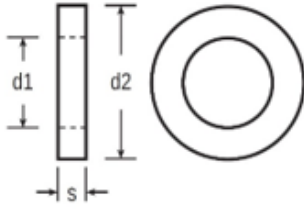

- Used with threaded fasteners (for example a bolt and a nut)
- Helps spread the tightening forces applied over an even and increased area, reducing the risk of surface stress and damage
- Conform to DIN 125A
- Made of steel
- Galvanised finish offers great resistance to corrosion

Product Description

Used with threaded fasteners (for example a bolt and a nut), designed to increase the area of load distribution. When the threaded fastener is tightened, there is a risk of the surface (or surfaces) becoming stressed. A washer helps spread the tightening forces applied over an even and increased area, reducing the risk of surface stress and damage. These washers conform to DIN 125A and are made of steel. The galvanised finish offers great resistance to corrosion.
