RS Professionally Approved Products bring to you professional quality parts across all product categories. Our product range has been tested by engineers and provides a comparable quality to the leading brands without paying a premium price.

Soft water jug filter replacement cartridge

Product Description

A jug filter is designed to convert tap water into cleaner drinking water through the use of replaceable cartridges. These cartridges come in 2 styles – one for hard water areas that will reduce the limescale, chlorine and bad taste from the supply and the alternative for soft water areas that will reduce chlorine and bad taste.

The scale and scum will be removed from tea and coffee and the “swimming pool” smell of chlorine will be removed from ice cubes as well as providing improved taste and reduced contaminants that are present in the supply.

Although these are not harmful to health, people’s expectations are now requiring a higher standard of drinking water.

General Specifications

Capacity	30 days or 150 litres
Soft water filter cartridge	Carbon
