RS Professionally Approved Products bring to you professional quality parts across all product categories. Our product range has been tested by engineers and provides a comparable quality to the leading brands without paying a premium price.

## Product Description

- *Used with threaded fasteners (for example, a bolt or a nut), spring washers are typically used to prevent the fastener from loosening, caused by vibration. The washer has an opened split, creating a 'single coil' look; as the fastener is tightened, the split is closed, with the resistance causing a locking effect. The cross-section of the washer is rectangular. The bright zinc plated (BZP) finish offers resistance against corrosion. These washers conform to DIN 127B specifications.*
