RS Stock No.: 2499562

RS Professionally Approved Products bring to you professional quality parts across all product categories. Our product range has been tested by engineers and provides a comparable quality to the leading brands without paying a premium price.

Water Sterilisers

22 litre per minute replacement ultra violet disinfection sleeve

Product Description

Approximately 1% of the population in the UK have private water supplies to their homes together with commercial buildings and factories.

Local authorities are responsible for regulating private water supplies used for purposes such as drinking, cooking, and washing within domestic and commercial premises.

Regulations on private water supplies were updated in 2010 and apply to all who own or use a private water supply and have been introduced to ensure that the water is wholesome, so that people who drink this water may do so without risking their health.

Most of these private water supplies will not have received prior treatment at a water works which means that the water is unlikely to meet the standards set by the Private Water Supplies Regulators. In such cases, water disinfection by Ultra Violet light is the easiest and most cost effective option open to those responsible for the supply.
