OVERVIEW

The National Trauma Transformation Conference Roadshow (NTTR) 2025 - 2026 : Benchmarking Global Standards in Emergency Trauma Care is a Malaysian initiative to enhance emergency trauma care by aligning local practices with global standards. Recognizing trauma as a major cause of death and disability, the roadshow aims to improve trauma care standards, foster continuous improvement, and equip healthcare providers with the latest knowledge and skills. This roadshow seeks to bridge the gap between current practices and global benchmarks, positioning Malaysia at the forefront of emergency trauma care excellence.

Through this transformative roadshow, the aim is to not only raise the standards of trauma care but also to cultivate a culture of continuous improvement, ensuring that healthcare providers are well-equipped to save lives and reduce the impact of trauma injuries across the nation.

The NTTR series will span six venues across Peninsular Malaysia, Sabah, and Sarawak. This 2 day event will convene healthcare personnel and leading local and international emergency trauma care clinicians to share global best practices, with the goal of establishing a robust and resilient trauma care system in Malaysia and reducing trauma-related fatalities.
