

Your Volta Chargers Are Shutting Down by the End of 2025

Shell has announced that every Volta charging station will be shut down and dismantled by December 2025. Across the country, more than 2,000 chargers will disappear, leaving countless properties without a way to serve the rapidly growing number of EV drivers.

For property owners and managers, this creates an immediate risk. Without charging, tenants and customers lose a valuable amenity, foot traffic declines, and properties fall behind competitors that continue to offer EV access. At the very moment when electric vehicle adoption is climbing faster than ever, your site could be left without a solution.

EOS Linx is here to make sure that doesn't happen.

Replace Volta with EOS and Keep Charging at Your Property

EOS Linx has developed a fast-track Rip & Replace program that allows properties to upgrade their Volta chargers with a smarter, more sustainable alternative. Our stations are solar-powered, supported by clean energy, and built to generate revenue while delivering a premium experience to drivers.

EOS OWNED & OPERATED

The Turnkey EV program allows for the most hands-off approach to adding EV charging to your location. If your location qualifies, the EOS team will provide the hardware and manage the installation while owning and operating the equipment.

PURCHASE PROGRAM

The Complete EV program gives you the most control over your EV charging infrastructure. Customers simply purchase the equipment through EOS and our team manages the project from the design through installation.

The Nova™

The Aurora™

The Solstice™

Replacing your Volta stations is seamless. EOS handles removal, installation, and activation, ensuring your property never loses momentum. Instead of a shutdown, you gain a future-ready amenity that increases dwell time, drives customer engagement, and strengthens your sustainability profile.

Now is the time to act. Volta stations will soon be removed, but your property doesn't have to lose EV charging. Contact EOS Linx today to schedule a site assessment and secure your place in the clean energy future.
