

# Ciclo de Carnot

**Prof. Jadoski**  
Física

Com um ciclo ideal mega inteligente

**2 transformações adiabáticas**  
**2 transformações isotérmicas**

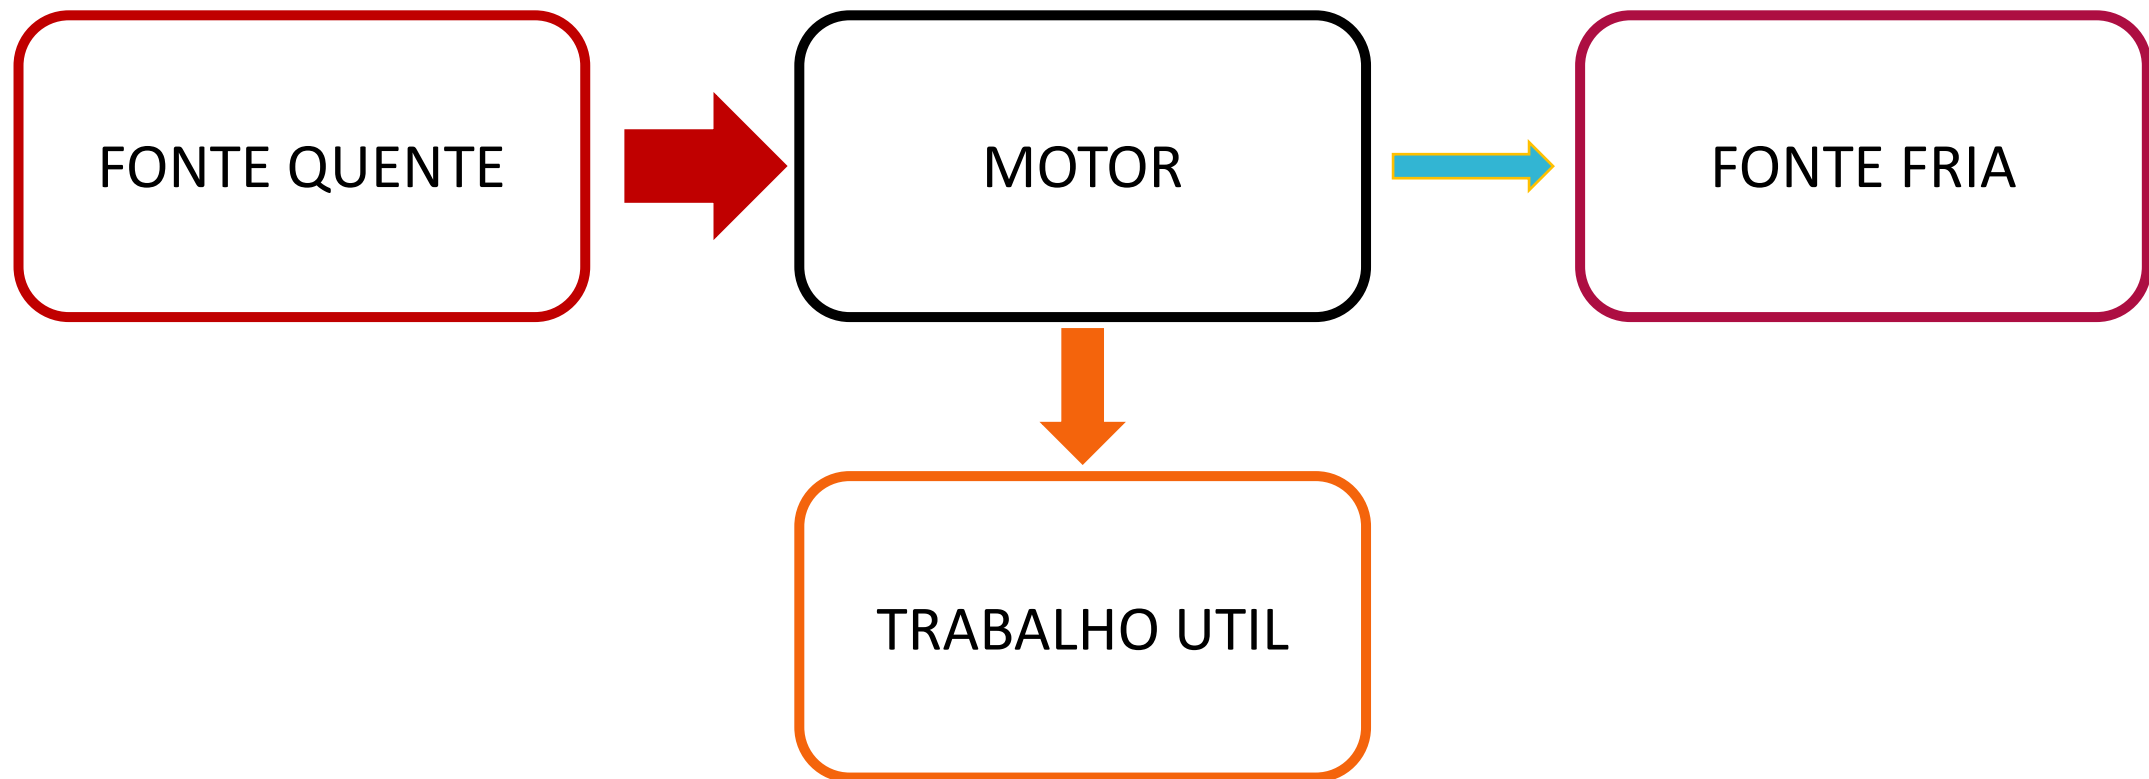

## Maquina perfeita, sem defeitos... ideal

**MAS NUNCA COM  
100% DE RENDIMENTO!!!**

Lembre-se, a maquina perfeita não desperdiça nada... Mas tem um gasto mínimo

## Rendimento:

$$\eta = 1 - \frac{100}{400}$$

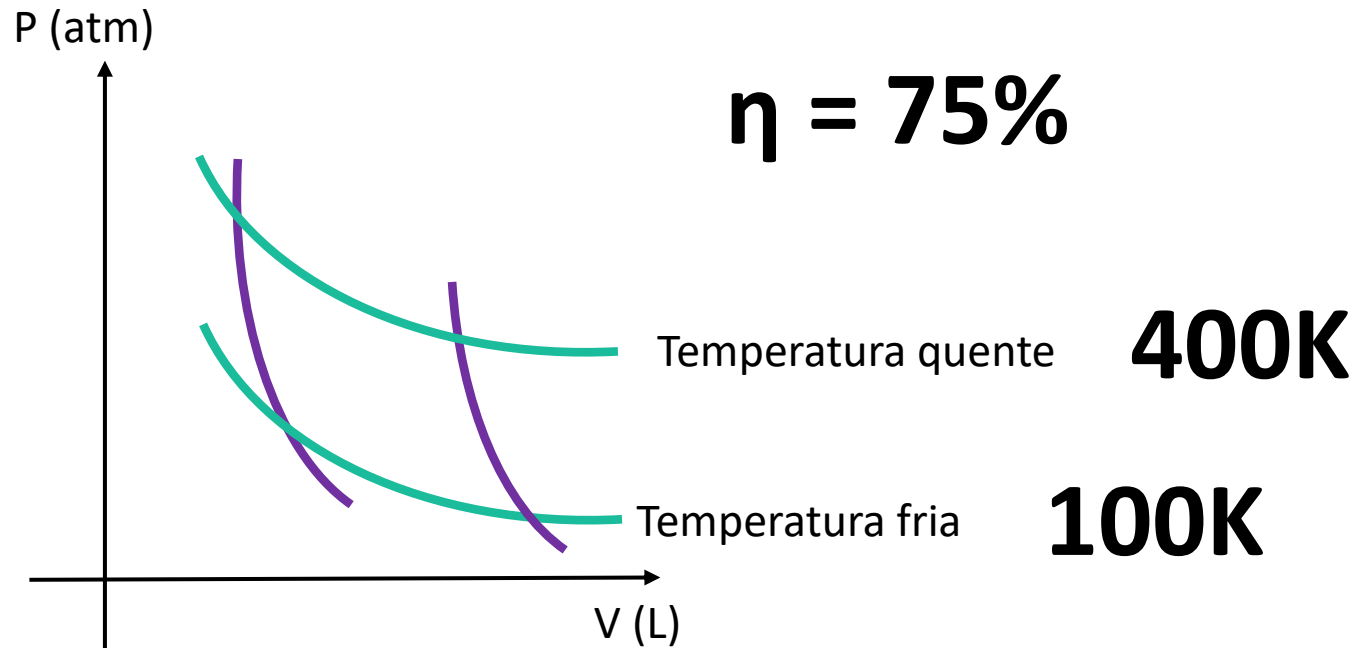

$$\eta = 1 - 0,25$$

$$\eta = 0,75$$

$$\eta = 75\%$$

$$\eta = \frac{W}{Q_r}$$

$$\eta = 1 - \frac{T_f}{T_q}$$

## Rendimento de maquinas frias:

$$\eta = \frac{Q_{\text{retirado do ambiente}}}{E_{\text{n}} \text{ externa necessária}}$$
