# Interpretação de texto

---

## ACAFE

- Leia título e subtítulo;
- Explore fotos e legendas de imagens;
- Analise cada parágrafo como um texto isolado, lendo apenas a primeira sentença dele;
- Para cada sentença, defina um tema central para o parágrafo.

## CARACTERÍSTICAS DA PROVA

- Texto único (até 2017)
- 7 questões (medicina)
- 4 questões (outros cursos)
- Interpretação
- Elementos gramaticais

## GETTING READY FOR THE TEST

(1) This summer Jeni Stepien walked down the aisle in Swissvale, PA, arm-in-arm with the man whose life was saved 10 years ago by her murdered father's donated heart. Though bitter-sweet for assembled family members, the moment clearly demonstrated how deeply moving and important organ donation can be. In fact, one person can save or improve the life of up to 50 other people by sharing his or her organs, eyes and tissue. But sadly, over 20 people die every day because of organ shortages.

(2) Only 40 percent of U.S. adults are registered organ donors (48 percent offer their eyes; 45 percent tissue). And if you're one of the reluctant who worry a doctor won't do everything possible to save your life because you are a donor, that's just not true and here's why.

(3) You're seen by the doctor who specializes in your condition, not the one who harvests organs. And doctors have every incentive to save you. Not only do they care about you, their reputation is on the line! You also may worry you'll be declared dead prematurely. In fact, organ donors have a right to extra tests to determine if they really are deceased, at no cost.

---

(4) So if you've been on the fence about becoming a donor, think about what your legacy could do! And it's easier than ever to sign up. You don't have to wait until you renew your driver's license. Apple's updated Health app lets you register to become an organ, eye and tissue donor.

BY DR. MEHMET OZ, MD AND DR. MICHAEL ROIZEN, MD

02) According to the first paragraph in Text1, what happened to Jeni Stepien this summer?

- A) She went to Swissvale in Pennsylvania (USA) to meet the man whose life was saved by her father's donated heart, after being murdered.
- B) Her life was saved by an army official, who had donated his heart.
- C) In Jeni's wedding ceremony, she was led to the groom by the man who received her father's heart.
- D) Jeni assembled her family members in Swissvale, PA, to thank the man who saved her father's life.

03) According to Text 1, which alternative does not describe a myth that makes people unwilling to become organ donors?

- A) Doctors care about organ donors and strive hard to save their lives.
- B) Doctors won't do their best to save an organ donor's life.
- C) Organ donors will be examined by doctors who harvest organs.
- D) Organ donors can be acknowledged dead rashly.

How can the second question in the cartoon “[c]an you put that in layman’s terms?” be synonymously rephrased?

- A) Can you write down the machine manual's terms?
- B) Can you make the machine work?
- C) Can you answer my question in a simpler way?
- D) Can I try to make the machine work?
