HOW THE WORLD GIVES BIRTH

In 2014 nearly one in five pregnant women worldwide delivered babies by cesarean section. The purpose of the procedure, in which the baby is delivered through the uterus and abdomen, was to avoid threatening complications that can arise during vaginal birth. Yet rates of C-sections in some countries are as high as 45 percent, higher than the 10 percent rate the World Health Organization associates with preventing the deaths of mothers and newborns.

Brazil, a country with one of the highest cesarean rates (55,6%), launched a public health campaign to promote natural births.

Why do some countries see so many cesarean births? WHO medical officer Ana Pilar Betrán says factors include families' and doctors' expectations of achieving safer outcomes and avoiding long labors. High rates, such as in Brazil, also can reflect a desire for time births more predictably, while low rates can reflect reduced access to medical care.

As doctors and expectant mothers reevaluate the benefits of delivering through the birth canal, C-section rates are declining. Betrán says.

THE JOY OF FOOD

The sharing of food has always been part of the human story. From Qesem Cave near Tel Aviv comes evidence of ancient meals prepared at a 300,000-year-old hearth, the oldest ever found, where diners gathered to eat together. Retrieved from the ashes of Vesuvius: a circular loaf of bread with scoring marks, baked to be divided. **"To break bread together"**, a phrase as old as the Bible, captures the power of a meal to forge relationships, bury anger, provoke laughter.

Children make mud pies, have tea parties, trade snacks to make friends, and mimic the rituals of adults. They celebrate with sweets from the time of their first birthday, and the association of food with love will continue throughout life – and in some belief systems, into the afterlife. Consider the cultures that leave delicacies graveside to let the departed know they are not forgotten.

And even when times are tough, the urge to celebrate endures. In the Antarctic in 1902, during Robert Falcon Scott's *Discovery* expedition, the men prepared a fancy meal for **Midwinter Day**, the **shortest** day and **longest** night of the year. Hefty provisions **had been brought** on board. Forty-five live sheep were slaughtered and hung from the rigging, frozen by the elements until it was time to feast. The cold, the darkness, and the isolation were forgotten for a while. "With such a dinner", Scott wrote, "we agreed that life in the Antarctic Regions was worth living."
