Metadata:

(a) EUROSTAT gives a value of 1566 mm (Source: EUROSTAT. 2015. EUROSTAT database. <http://ec.europa.eu/eurostat/data/database>. Accessed on 01/06/2015)

(b) Overlap between surface water and groundwater is nearly 100% of groundwater recharge; most of the groundwater is drained by the rivers and becomes the low flow of water courses. Slovenia has only a very short coast and has a karstic ground.

(c) Surface water outflow: 3.8 km<sup>3</sup>/yr to Italy, 14.47 to Croatia.
