

**TABLE 1**

**Priorities used to assign irrigated area to cultivated areas on coarse soil in Belgium.**

<b>Attribute in Corine land cover 2000 data base</b>	<b>Attributes in soil map</b>	<b>Priority</b>
Non-irrigated arable land (211) or complex cultivation patterns (242)	SLTXCL = 1 and SLTXCL2 = 1	6
Non-irrigated arable land (211) or complex cultivation patterns (242)	SLTXCL = 1 and SLTXCL2 > 1	5
Fruit trees and berry plantations (222) or pastures (231) or land principally occupied by agriculture, with significant areas of natural vegetation (243)	SLTXCL = 1 and SLTXCL2 = 1	5
Non-irrigated arable land (211) or complex cultivation patterns (242) or fruit trees and berry plantations (222)		4

\*: SLTXCL represents the soil texture class of the main soil type, while SLTXCL2 is the soil texture class of an associated soil; a soil texture class of 1 is assigned to soils having less than 18% clay content and more than 65% sand content.
