Supplementary information for

Design and characterisation of spatial units for monitoring global impacts of environmental factors on major crops and food security.

René Gommès, Bingfang Wu, Zhongyuan Li, Hongwei Zeng

The ZIP file contains ESRI Shapefiles for the global CropWatch Mapping and Reporting Units (MRUs). The definition and specifications of shapefiles, the *de facto* standard for GIS polygons can be downloaded from the Internet¹.

The following fields are defined:

1. ADM0_NAME

A name for the MRU polygons that includes the continent, e.g. AF, AM_N, AM_S etc.

Example: "CPSZ_AF_ZAF_MEDIT", i.e. Mediterranean South Africa (Cape province and surroundings)

2. Cname

The Chinese name of the polygons. Simplified Chinese fonts (e.g. GB-18030) must be enabled to visualise this field correctly.

Example: "巴西东北部", Brazilian Nordeste

3. Long_Name

An explicit name for each MRUs with spaces separating words

Example: "China Loess region"

4. Full_Name

Same as Long_name, but with spaces replaced by the underscore character (_)

Example: "America_northern_great_plains"

5. ADM0_code

The numbers of the MRUs prefixed by the letter C

Example: "C03"

6. New name

A space separated name suitable for reporting

Example: "Northern Great Plains"
