

## Ferrier Custom Homes, LP Lost Creek Phoenix

Like a phoenix rising from the ashes, so to speak, is how Donald Ferrier, president of Ferrier Custom Homes, describes this Lost Creek project. The client's previous home on this same property was completely destroyed in a fire, but she wanted to remain on that same land. However, Ferrier explains, she wanted to design/build a home with a more modern twist, one that would be a truer reflection of her values and personality. Thus, there was a heavy emphasis on modern (but still comfortable) features and finishes, as well as energy efficiency and sustainability. Given the experience of her previous home, the client was very interested in fire-resistant materials and durable construction techniques.

Located in a more

traditional neighborhood, the modern design stands out as a beacon of change. "The way the home is situated on the lot really creates an impressive, memorable experience that you have to see to fully appreciate," Ferrier says. The home is powered by solar panels, making it a net-zero energy home. With a modern aesthetic both inside and out, the home stands out from the surrounding properties. The multiple finishes, like the exterior stone, add a natural feel. Ferrier Custom Homes specializes in some of the most energy-efficient, sustainable, green homes in the country, and this home, a truly custom project, is an extension of that philosophy.
