CAPOFERRI

FACADE ATELIER

MATERIAL • CRAFT • ARCHITECTURE

2026

Exceptional architecture is revealed up close.

It is not about adding complexity. It is about making material, movement and detail part of one architectural idea.

Materials

The surface is not decoration.
It gives identity, touch and time.

01 • BRONZE

Time enhances its surface.

Noble materials do not age: they gain character. Over time, bronze reveals new tones, depth and a unique patina. Every mark reinforces its authenticity, turning the surface into a living expression of the material.

Precision and minimalism

Steel enables slender sections, mechanical strength and a restrained presence. AISI 304 or 316 is selected according to exposure and performance, with the option of a thermal break.

Slenderness.
Strength.
Control.

Profiles, hardware and bespoke components are developed as a coherent family, not as added parts.

03 • WOOD

The grain is part of the design.

Oak, mahogany, cedar and teak are selected for stability, durability and expression. Grain direction, joinery and finish are resolved as part of the architectural composition.

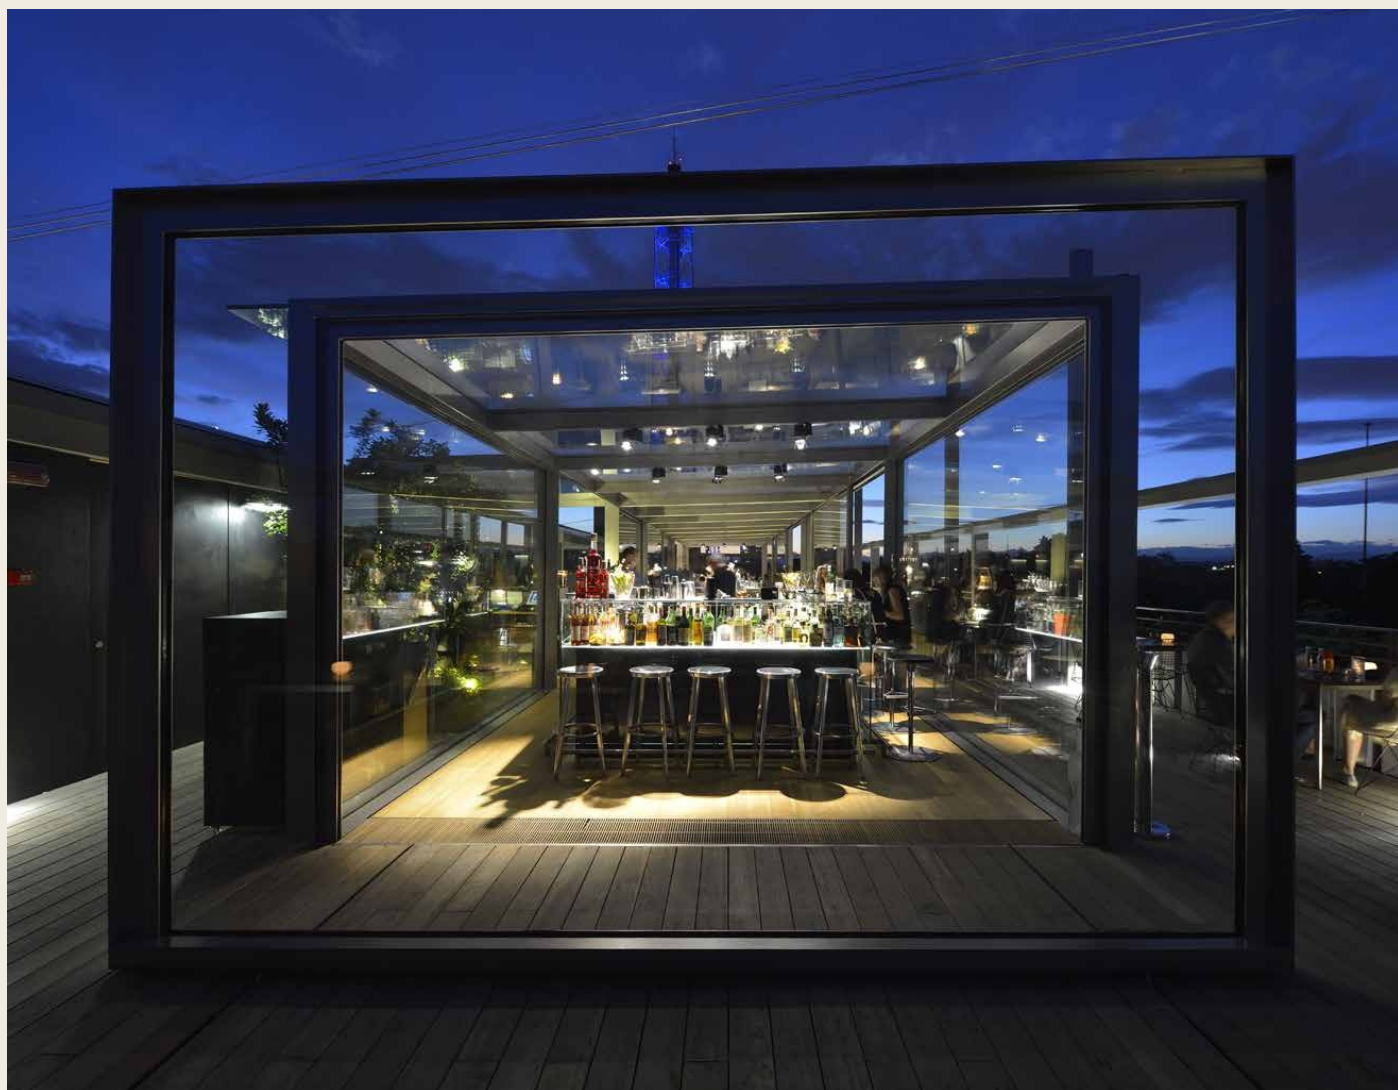

SELECTED TIMBER
MACHINING • ASSEMBLY • FINISH

The material that completes the silence.

Glass is never considered in isolation. Weight, edge, joints, drainage and connections are coordinated so every element preserves transparency, comfort and proportion.

TRANSPARENCY • PERFORMANCE • PROPORTION

Four noble materials. One purpose.

BRONZE

Patina and depth

STEEL

Slenderness and precision

WOOD

Scale and touch

GLASS

Light and continuity

Since 1894

Five generations refining the same gesture.

Born near Bergamo, Capoferri has transformed a family craft into a design culture where joinery, metalwork, engineering and advanced manufacturing work together.

ADRARA SAN MARTINO · TELGATE · ITALY

The final detail is not decided by a machine.

Adjust, burnish, patinate, select, assemble. Industrial precision sets the geometry; craftsmanship brings touch and character.

HAND-FINISHED, PIECE BY PIECE

INDUSTRIAL CRAFT

Repeatable precision.

Two specialist production centres integrate wood and metalwork, machining, assembly, preassembly and inspection. Technology ensures control; every project retains its singularity through a precise balance of craft and technology.

Recreating hardware and profiles for restoration projects.

Capoferri has a specialist department dedicated to recreating historic hardware and enclosures. Counterweights, pivots, locks and cast pieces are developed around use, weight and the geometry required for each enclosure.

Heritage restoration and historic systems.

CAPOFERRI REFERENCE · HONG KONG

Suspended bronze above the city.

ROSEWOOD HOTEL
KPF Studio + Tony Chi · 2019

Bespoke brass and bronze elements, entrances, partitions and windows developed for a unique hotel 191 metres above the city.

Seven metres of bespoke curved sash window.

Curved oak sash windows,
shaped in plan and nearly
seven metres high.
The counterweight and
mechanisms were developed
specifically for the geometry
and the user
experience.

PRIVATE RESIDENCE
Gabriel Chipperfield Architect · 2019

Intervene without erasing history.

Curved bronze partitions, developed from a 3D scan and anchored with minimal intervention to the historic fabric.

OLD ROYAL NAVAL COLLEGE
Hugh Broughton Architects · Greenwich Foundation · 2019

RIBA LONDON AWARD
RIBA CONSERVATION AWARD

Total transparency.

Large automated panels open the wellness centre to the landscape. Vertical pivots free the facade from a permanent central mullion.

CANTINA COLLEMASSARI
Edoardo Milesi & Archos · 2007

Shared precision. Three distinct contexts.

HOTELS

Terrazza Triennale
Milan

CULTURAL Morgan Library
Manhattan

HERITAGE Palazzo Anguissola
Milan

Hotels, culture and heritage demand distinct responses. Material culture remains.

Solutions for your project

Systems designed for architecture, material and use.

01 Large-format windows and balcony doors

02 Pivot, sliding and folding systems

03 Sash windows and counterweight systems

04 Curved geometries, arches and free-form solutions

05 Bronze, steel and timber frames

06 Interior partitions and storefronts

07 Historic restoration and reproduction

08 Retractable roofs and enclosures

09 Automation and bespoke mechanisms

10 Mock-ups, testing and specialist installation
