

# Naming Convention for ESCAS facilities in Indonesia

360 A 001 1

Country Code - Facility Code - Facility Number - Line Number (Default 1)

**ISO Country Codes** [https://en.wikipedia.org/wiki/List\\_of\\_ISO\\_3166\\_country\\_codes](https://en.wikipedia.org/wiki/List_of_ISO_3166_country_codes)  
Indonesia - 360

## Facility Code

A - Abattoir

F – Feedlot/ Depot

I - Importer

## Facility Number

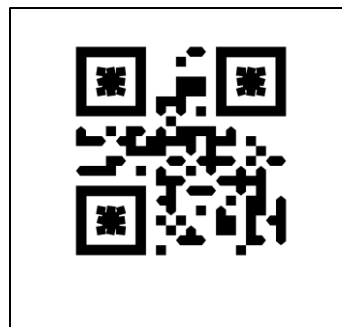

Numerical number identifier. Sequence of installation

## Line Number

Default to 1 if only one approved line

If there are more than one slaughter line or separate sheds that need to be individually identified this is how this would be achieved.

## Plaques:

360 A 001 1

## Concept

Codes will be printed off and distributed for installation at facilities on their first audit or inspection by staff. This will then be correlated to the existing ESCAS codes used in each of the platforms to create a single facility identifier.

Plaques to be installed at the front of the restraint box in a visible location in abattoirs and at the office, or the main pillar in a feedlot and depot. Feedlot trials may warrant individual QR codes to be used for each shed or pen in the future.
