

Which of the following best describes your situation?

Farmer/producer

Are you responding on behalf of an organisation or industry body?

No

How would you like to respond?

a. Answer discussion paper questions via the online survey

What are the opportunities to reduce emissions and build carbon stores in agriculture and the land? What are the main barriers to action?

No clear pathways for uptake. Main barriers are a lack of understanding, an unedified plethora of businesses trying to make money out of farmers. No clear direction from government

How can we progress emission reduction efforts whilst also building resilience and adapting to climate change?

By getting replacement fuel sources up and running. Bio fuels and hydrogen need to be accelerated

How can the Australian Government bring together existing effort and new initiatives into one coordinated plan?

State and territory gvts need to work with fed gvt

What are the most important options to be further adopted or supported, looking in the short and the longer-term?

Alternate fuels, solar, new technologies

What are the practical solutions to increase uptake?

Peer learning pilot programs

How do you see the agriculture and land sectors contributing over the medium and longer-term? What are the opportunities to deliver emission reductions in parallel with wider goals?

The need to deliver alternate fuel and energy has to be done slowly; Agriculture can not adapt quickly overnight

How can the Australian Government better support agriculture and land sectors to:

a) drive innovation

b) build capacity

c) ensure the system enables emissions reductions

Pilot programs Listen to farmers needs, that will differ between regions.

What new initiatives could the Australian Government design that would support emissions reduction and carbon storage in agriculture and land and help ensure a productive, profitable, resilient and sustainable future for the sectors?

Use of research at key locations.

A consistent and trusted approach for assessing and reporting emissions is often raised as a barrier to reducing emissions. Is there a role for the Australian Government in addressing this concern, and how can producers and land managers be supported?

Create a profitable business model for farmers

What skills, knowledge and capabilities do you think producers and land managers need to implement change? What information and data would help them make decisions about emissions reductions and sustainable land management in the short and longer-term?

Access to finance ,availability of finance. Being able to accurately measure emissions

Is your response confidential?

No

Do you agree to your response being published on our website?

Yes

Please de-identify my response

Yes

I have read and understood the privacy notice and consent to the collection, use and disclosure of my personal information as outlined in the privacy notice.

Yes

Confirm that you have read and understand this declaration.
