

Which of the following best describes your situation?

Farmer/producer

Are you responding on behalf of an organisation or industry body?

Yes

Who are you responding on behalf of?

How would you like to respond?

a. Answer discussion paper questions via the online survey

What are the opportunities to reduce emissions and build carbon stores in agriculture and the land? What are the main barriers to action?

The market is waiting on the release of the new IFLM carbon project scheme. It is the same with the Nature Repair Market.

How can we progress emission reduction efforts whilst also building resilience and adapting to climate change?

A clear database for Australian producers on emissions factors. A step-by-step process to ensure accurate accounting methodologies for agricultural GHG emissions.

Are there initiatives or innovative programs underway that could be applied or expanded on at a national scale?

Accurate GHG data recording and reporting is needed. Currently, work by private industry is being completed in conjunction with the Zero Net Emissions Ag CRC. Areas of focus should be on carbon insetting within production systems to accurately report on production systems' net GHG emissions or sequestration.

How can the Australian Government bring together existing effort and new initiatives into one coordinated plan?

Act federally and bypass state governments and territories for increased efficiency.

What are the most important options to be further adopted or supported, looking in the short and the longer-term?

Carbon insetting. Emissions abatement. Accurate GHG accounting.

What are the practical solutions to increase uptake?

Accessible, accurate and auditable GHG accounting software. Mandatory carbon reporting. Australian Carbon Exchange operation.

How do you see the agriculture and land sectors contributing over the medium and longer-term? What are the opportunities to deliver emission reductions in parallel with wider goals?

Mandatory reporting will deliver market access to Australian agriculture. IFLM methodology to be released. Carbon insetting to be accounted for.

How can the Australian Government better support agriculture and land sectors to:

a) drive innovation

b) build capacity

c) ensure the system enables emissions reductions

Understanding of on farm sequestration levels, to know if producers need to pursue offsets for a net zero production system. The new ACE platform should be interactive with other departments. A government backed standardised GHG accounting software.

What new initiatives could the Australian Government design that would support emissions reduction and carbon storage in agriculture and land and help ensure a productive, profitable, resilient and sustainable future for the sectors?

I am struggling to find the link for the nature repair bill to provide a financially transactional mode of commerce that delivers known sequestration benefits.

A consistent and trusted approach for assessing and reporting emissions is often raised as a barrier to reducing emissions. Is there a role for the Australian Government in addressing this concern, and how can producers and land managers be supported?

The government needs to have an ghg accounting platform or have a verified system that reports to the IPCC emission factors.

What skills, knowledge and capabilities do you think producers and land managers need to implement change? What information and data would help them make decisions about emissions reductions and sustainable land management in the short and longer-term?

Production system GHG emissions understanding, including inseting and offsetting. GHG emissions on labelling to help with accurate scope 3 reporting, like ingredients in a product are listed.

Do you have any additional views or feedback that you would like to include in your response?

This is a tremendous opportunity to be a world-leading agricultural product exporter who ensures a premium for the products we produce.

Is your response confidential?

No

Do you agree to your response being published on our website?

Yes

Please de-identify my response

Yes

I have read and understood the privacy notice and consent to the collection, use and disclosure of my personal information as outlined in the privacy notice.

Yes

Confirm that you have read and understand this declaration.

Yes
