Submission 0182

Live Sheep Exports are inherently brutal and unnecessary, they must end this term of parliament and not be allowed to drift along a vague time line. The jobs lost offshore by this industry impacts the Australian economy and is an dark mark against its population. Animals slaughtered in Australia then fresh meat sent by refrigerated planes to the country importing the meat or snap frozen and air. Australias frozen beef exports are massive and majorly successful. Slaughter here and ship creates more Australian jobs, it reduces the methane output on ships, if an animal perishes on a ship, it doesn't feed anyone.

Act now and please do not defer this until next term, it was one of your mandates so please honour it.
