

Live export WA UNDERPINS
the wool industry as a 4
year old wether is at the
end of maximum wool
production and is fattened
in a shorn state, either by
paddock or supplementary
feed at a time of maximum
pasture protein production
in clover based pastures
which sometimes is almost
a \$ value equivalent to an
annual wool clip and is

maximising income
providing taxation revenue
and local retail viability in
country towns.

Closing live export will do
great damage to rural
towns and businesses. |
