

# **ISSUES THAT CANNOT BE FIXED IN LIVE EXPORT**

**Motion sickness.**

**Broken limbs(especially cattle) from rough seas and being thrown against railings.**

**Pressure sores from lying on metal grating.**

**Oesophagus and lungs burnt from urea**

**Faecal jackets (cattle) from lying in and being covered in their own shit - this increases body temperature.**

**Quick spread of salmonellosis from contaminated feed and water troughs.**

**Salt spray blindness on open deck ships.**

**It's a real catch 22 with space - animals need enough space for at least half to be able to lie down when required however this gives them too much room to fall and slam into things in rough seas...The list goes on.....**

## **BAN LIVE EXPORT**
