Submission to the Community Engagement Review

The proponents of nuclear power make their case for zero emissions - which is impossible and a myth. They argue for low cost, which given the lived and accounted for experiences throughout the world, is absolutely false. The risk and dangers, from Fukushima to Chernobyl to Three Mile Island to many others indicate that dangers, pollution of the entire pacific ocean, atmospheric radiation blowing in the wind, are continuing problems causing cancer and ill health and damage to the environment. There are no current solutions to the handling and disposal of nuclear waste - dangerous for hundreds if not millions of years and answers have not been forthcoming since 1945 when nuclear weapons killed hundreds of thousands of Japanese civilians. Following the claims of MP O'Brien, an ardent proponent for nuclear, read the science and the evidence and the reality. Vote NO to nuclear and support solar (available throughout Australia), conservation of energy, wind and wave, and more research on alternatives to nuclear. Thanks - [REDACTED]

Subject: The Story of Wyoming – Time to Talk Nuclear

To:

View this email in your browser

Dear Friends,

As coal plants race to exit the grid without any guarantee of a replacement under Labor, we should learn from the US state of Wyoming as it embarks on a transformation from coal to nuclear.

Watch this video to learn how Wyoming is facing the challenge of decarbonisation by replacing retiring coal plants with next generation, zero emissions nuclear energy – click [HERE](#).

For anyone who missed my previous emails, you can find:

A summary of nuclear survey results [HERE](#) A video about my Japan trip [HERE](#) A video about my visit to Hiroshima [HERE](#) A video about my visit to Fukushima [HERE](#) A published essay about my visit to Japan [HERE](#) A published essay about my visit to the USA and Canada [HERE](#) A video about Australia as a nuclear nation [HERE](#) A published essay to mark World Nuclear Energy day [HERE](#) A published essay to on a mature conversation on nuclear [HERE](#).

A video responding to Chris Bowen [HERE](#)

A published essay about AUKUS and nuclear energy [HERE](#).

A speech from Peter Dutton about Coal to Nuclear [HERE](#).

A published essay about Wyoming's energy story [HERE](#) A published essay with 10 reasons Bowen is wrong on nuclear [HERE](#).

Please stay engaged as I continue my journey exploring next-generation, zero-emissions nuclear technology.

Best regards,

[REDACTED]

Thank you for your feedback in the recent Time to Talk Nuclear survey. Please keep your eye out for future email as [redacted] shares exciting updates and information about the Time to Talk Nuclear campaign.

Nuclear power and the environment - U.S. Energy Information ...

Nuclear energy produces radioactive waste. A major environmental concern related to nuclear power is the creation of radioactive wastes such as uranium mill tailings, spent (used) reactor fuel, and other radioactive wastes. These materials can remain radioactive and dangerous to human health for thousands of years.

16 Aug 2023 About Radioactive Waste. As defined in the United States, there are five general categories of radioactive waste: High-level waste: High-level waste includes used nuclear fuel from nuclear reactors and waste generated from the reprocessing of spent nuclear fuel. Although defense-related activities generate most of the United States' liquid ...
