To the ones responsible for enacting the renewable energy change needed ,

As a science teacher, I use every opportunity to teach my students about the anthropogenic climate change, which we are facing and have to adapt to.

I urge you to mitigate the terrible consequences that future generations will face in case we do not halt global temperatures to 1.5 degrees Celsius. It is paramount that you regulate and facilitate for the creation of more renewable energy projects and apply a hefty tax to the polluting fossil fuel industry, so much so that they are discouraged to pursue such a non-profitable business model. It is also very important that Traditional Owners are duly consulted about any projects on their land.

Thank you for your attention.

Yours sincerely,
