Subject: Submission to the Community Engagement Review

New infrastructure is urgently required in order support the expansion of renewable energy, specifically in the areas of power generation and transmission. Without it we are condemned to suffer the effects of climate change. The benefits of such new infrastructure are immense, new industries, new employment opportunities and an enhances quality of life for all Australians.

This new infrastructure must be planned for in a wholistic and coherent way with robust, equitable and sustainable broad scale policies and planning regimes created through a transparent consultation process, not piecemeal although worthy, small initiatives by people and organisations who cannot wait any longer for government action. Catastrophic climate change is already manifesting itself around the world and after ten years of Federal inaction implementing the necessary steps must urgently commence.

Yours sincerely,
Joe Atkinson
