Dear Team,

Renewable energy infrastructure will take years to develop and build costing billions of dollars.

Has there been consideration to renewable energy generation at source? Have new developments been forced to include trees in their planning. Are there plans to also decarbonise by reforestation? Shade on the planet will reduce warming.

There is a whole massive plan in development right now that will lead the way in improving industry engagement into the ESG actions required.

Should you be interested in hearing more about it, please contact me directly and I will be happy to share.

We need to work together and action ideas to have any chance of success.

Yours sincerely,
