

**Q7. Do you support the proposed workplace exposure standard (WES) for diesel particulate matter (DPM) to protect workers from the adverse health effects of exposure to diesel engine emissions (DEE)?**

No

**Q8. What are your reasons for your response to Question 1? Please provide evidence or information to support your response.**

Too hard to monitor. Too costly. People are exposed to these outside of workplace

**Q9. Is there an alternative WES to DPM as respirable elemental carbon, or additional WES that should be considered to protect workers from DEE? Please provide evidence or information to support your response.**

No

**Q10. What changes would you need to make in your workplace (over and above any controls currently in place) to ensure workers and others at the workplace are not exposed to levels of DPM above the proposed WES? Please include in your response: i. a description of the control measures currently in place at your workplace(s) to minimise exposure of workers and others to DEE.ii. details of any costs to implement the WES for DPM (e.g., upgrade of ventilation systems in area X, costing approximately \$XXX).**

No current controls, currently all controls are mitigating dusts.

**Q11. Is there additional evidence or information that you think should be considered?**

Perhaps first measure DEE in hi truck traffic areas open to public such as Cavern, Grand Junction Road, SA

**Q12. Are there any additional comments you would like to make?**

What monitoring and control measures would be considered "As far as reasonably practicable" given DEE is reasonably foreseeable?

Q13. Upload your submission here: (PDF,DOC or  
DOCX)
