

Q7. Do you support the proposed workplace exposure standard (WES) for diesel particulate matter (DPM) to protect workers from the adverse health effects of exposure to diesel engine emissions (DEE)?

Yes

Q8. What are your reasons for your response to Question 1? Please provide evidence or information to support your response.

I was in industry for over 20 years and have noted the effects of these on myself and work colleges

Q9. Is there an alternative WES to DPM as respirable elemental carbon, or additional WES that should be considered to protect workers from DEE? Please provide evidence or information to support your response.

A stronger look into industry and the smaller businesses that are operating in the smaller towns need to be audited and checked for compliance, also some bigger corporations that are not up to the current standards.

Q10. What changes would you need to make in your workplace (over and above any controls currently in place) to ensure workers and others at the workplace are not exposed to levels of DPM above the proposed WES? Please include in your response: i. a description of the control measures currently in place at your workplace(s) to minimise exposure of workers and others to DEE.ii. details of any costs to implement the WES for DPM (e.g., upgrade of ventilation systems in area X, costing approximately \$XXX).

Defiantly the correct ventilation and exhaust extraction needs to be put in place from the start and then better PPE to be supplied

Q11. Is there additional evidence or information that you think should be considered?

not answered

Q12. Are there any additional comments you would like to make?

not answered

**Q13. Upload your submission here: (PDF,DOC or
DOCX)**
