Hazardous Chemical Safety Regulations 335, 338 and S9 Part 3 & CoP Labelling of Workplace Hazardous Chemicals Section 2.1 International suppliers of chemicals are not re-labelling their chemicals for the Australian market, and so we receive chemicals that have a different label contact information and address to that in the associated Australian compliant SDS. Notification of Schedule 11 Hazardous Chemicals The NSW jurisdiction Regulations outline notification required based on GHS Classification, however their actual online notifications submission platform still requires notification by packing group which in many cases do not align. This creates confusion for PCBU preparing the notification. Further clarity around alignment of GHS Classification and Dangerous Goods Packing Group would be helpful.
