Legislative framework

Control of the risk of falls from heights; We need to have some uniformity from Act to Regulations etc. The Act states the risk of falls from ANY height must be controlled yet other forms of legislation talk about specific measurements before the risk of fall must be controlled (2 meters and 3 meters). We need to remove any suggestion of height measurement. If we need to control all risk of falls from ANY height, then so be it. Lets not confuse the issue by adding specific heights into the equation.
