

We are disagree with a prohibition on the use of engineered stone.

Reason: we have worked with engineering stone for 8 years.

We have been trained to manage the risk of respirable crystalline silica at work.

Our CNC machine that have been specifically designed for use with water attachments and maintain an adequate water pressure to make sure water is reaching the materials .

Using half face mask when manually polishing material. .

Using hose water to flush down the residue

we thoroughly wash faces and hands at end of shift.

We change into work clothes from street clothes at the beginning of shift to prevent contaminated dust sticking to clothing and then transferred to the vehicle and their homes

With our controls above we believe that we are safe to work with engineering stone.
