37%
of people struggle with over 20 passwords, just in personal life.

80%
of data breaches are the result of weak or reused passwords.

$70
On average, a single password reset costs an enterprise $70.

$4.35 million
The global average cost of a data breach increased to $4.35 million.

Reduce Risk and Improve User Satisfaction with IDmelon Passwordless Authentication.

Why is going passwordless a real game-changer for organizations?

Better Security

Passwords can be easily stolen by hackers. By going passwordless with FIDO authentication standard, organizations can use modern stronger methods, like security keys, to prevent account takeovers.

Happier Users

Remembering and managing complex passwords can be a pain. Passwordless authentication makes life much easier for users because they no longer deal with passwords. Instead, they enjoy safer easier logins with their existing devices such as smartphones, contactless fobs, and ID badges.

Cost Reduction

Organizations often waste time and money on helping users who forget their passwords or get locked out of their accounts. With passwordless authentication, these problems disappear, support teams can focus on more important things, and organizations can save some budget.

IDmelon makes organizations more secure, reduces the risk of phishing attacks, optimizes user experience, and saves money on support.

Phising-resistant
Passwordless Authentication.
Superior security for workforce authentication with existing devices as FIDO security keys.
