

Shared Computers

Last updated: March 2023

Use your employees' existing devices to secure and simplify their logins as well as your existing systems to save time and money.

A majority of the world's employees including deskless workers, who are not anchored to a desk/computer, and shift workers, who use shared PCs, all have to log out of systems/apps at the end of each session, so that another user can log in to the same computer or software. It is neither safe nor easy to struggle with passwords on a regular basis. It becomes even more cumbersome if a mobile user has to repeatedly go through this username-password process during one workday.

Benefits for Organizations

- Increased security,
- Cost savings,
- Fast deployment and simple management.

Benefits for Workforce

- Convenience and productivity.

IDmelon empowers you to avoid the traditional security-versus-convenience trade-off.

IDmelon Passwordless Orchestration Platform (IPOP) helps your staff to safely and simply share workstations among multiple coworkers, without compromising on the level of security at all. It is a complete automated procedure which lets you save budget and enables your employees to experience faster, more convenient, and safer logins. Efficient employee logins will therefore result in customer satisfaction and strong brand reputation.

Benefits for workforce

Convenience and Productivity

Around 82% of data breaches are traced back to a human element, due to negligence or through malicious intent. Struggling with traditional username-password process, employees may have to memorize complicated passwords, regularly reset them, use one password for several accounts, or often forget them, resulting in wasted time, frustration, and missed work opportunities. But instead, with IDmelon, employees can use devices they have and methods they know to log in quickly and securely without dealing with passwords at all. They don't need to worry about security key loss or damage, either. Instead, they focus on what matters the most: their job.

Benefits for Organizations

Increased security

Neither traditional username-password nor 2FA with mobile notification are safe. IDmelon provides solutions based on modern resilient FIDO authentication standards.

Cost Savings

IDmelon empowers your workforce to use their existing smartphones, ID badges, access cards, and fobs to log in easily and securely, without even the need to hand-hold them through onboarding. There is no need to make any changes to your organization's existing infrastructure and systems, either.

Fast Deployment and Simple Management

Deployment can happen overnight, as you don't need to buy new dedicated devices or pay for changes to your systems. And with IDmelon Admin Panel, FIDO security key management is made possible, requiring little administration but granting full control over access to systems.

Phishing-resistant

Passwordless Authentication.

Superior security for workforce authentication with existing devices as FIDO security keys.
