Tap & Login

Last updated: March 2023

Minimize costs and optimize user-experience with IDmelon phishing-resistant authentication solutions.

Passwords are an inadequate way of authentication for workforce, as they are a common cause of data breaches. SMS-based 2FA is phishable, and buying a new dedicated device to use for only authentication purposes is both expensive and time-consuming and requires user onboarding.

Hardware security keys can give both employees and employers a headache. Employees need to learn how to use a new piece of hardware and carry it every where with a high chance of forgetting, losing, or damaging it.

Benefits for Organizations

- Increased security,
- Cost savings,
- Fast deployment and simple management.

Benefits for Workforce

- Convenience and productivity.

It becomes worse if they log in to shared PCs repeatedly during a workday. And employers are constantly complaining about endless costs of key purchase and replacement that they have to cover in addition to costs of repairing USB port damages due to constant plugging/unplugging.

IDmelon delivers both security and convenience.

IDmelon Passwordless Orchestration Platform (IPOP) helps your staff to safely and simply tap their existing smartphones, ID badges, access cards, and fobs to log in and put an end to account takeovers. It enables you to have a similar smooth experience you have with a key card to enter a hotel room or building.

With a complete automated user-onboarding procedure, organizations can save budget and their employees can boost their productivity through faster, more convenient, and safer logins. Efficient employee logins will therefore result in customer satisfaction and strong brand reputation, so as to stay ahead of the competition.

Benefits for Workforce

Convenience and Productivity

Around 82% of data breaches are traced back to a human element, due to negligence or through malicious intent. Struggling with traditional username-password process, employees may have to memorize complicated passwords, regularly reset them, use one password for several accounts, or often forget them, resulting in wasted time, frustration, and missed work opportunities. But instead, with IDmelon, employees can use devices they have and methods they know to log in quickly and securely without dealing with passwords at all. They don't need to worry about security key loss or damage, either. Instead, they focus on what matters the most: their job.

Benefits for Organizations

Increased Security

Neither traditional username-password nor 2FA with mobile notification are safe. IDmelon provides solutions based on modern resilient FIDO authentication standards.

Cost Savings

IDmelon empowers your workforce to use their existing smartphones, ID badges, access cards, and fobs to log in easily and securely, without even the need to hand-hold them through onboarding. There is no need to make any changes to your organization's existing infrastructure and systems, either.

Fast Deployment and Simple Management

Deployment can happen overnight, as you don't need to buy new dedicated devices or pay for changes to your systems. And with IDmelon Admin Panel, FIDO security key management is made possible, requiring little administration but granting full control over access to systems.

Phising-resistant
Passwordless Authentication.
Superior security for workforce authentication with existing devices as FIDO security keys.
