

JAVA Developer (m/w)

Working Student – Internship

About wohnungshelden

wohnungshelden is a Munich based real estate startup which delivers a SaaS solution for the digital change of tenants. Our goal is to streamline the entire letting process while mining and analyzing process data to deliver insights in the workflows and the market. Our main target audience are large real estate companies with many lettings e.g. new constructions, large agencies or asset investors. Within the last year we already acquired multiple customers with approx. 150.000 apartments in total and want to accelerate our traction.

Currently our company is part of the only European PropTech accelerator – the Blackprint PropTech Booster in Frankfurt. Now we are searching for working students and interns to work closely with the team and extend and improve the existing solution.

Your profile

- Passion for software development
- Fluent in **Java**
- Experienced with Maven and Jenkins
- Optimally experienced in working with the Google Cloud Platform, NoSql databases or JavaScript Frameworks (e.g. AngularJS)
- Care a lot about code quality and maintainability

Responsibilities

- Developing, updating and optimizing key features of our backend
- Analyzing and creating key performance indicators to support our customers' decisions
- Improving the performance and the scalability of the system

Why joining wohnungshelden

If you gained already some programming experience e.g. in previous working student jobs or in your free time and want to get a deep dive into building highly scalable architectures with state of the art technologies then you should definitely join us. We not only provide the typical startup flair without hierarchies, flexible working times and an open culture we also want to find people who are passionate about taking responsibilities and grow within the company.

Please get in touch with us at team@wohnungshelden.de - and btw. a resume is enough!

We are looking forward to hearing from you!
