

# Avalancherisk assessmentbulletin

(valid outside marked and open slopes)

## MASSIVE:CHABLAIS

written on Monday 04 January 2021 at 4 p.m.

Risk estimation until Tuesday 05 January 2021 in the evening

Above 2200 m: Significant risk. Below: Limited risk.

**Spontaneous departures:** Rare bottom plates (crawls) below 2000 m.

**Triggers skiers:** Some recent hard old / friable plates.

Risk indices: 5 very strong - 4 strong - 3 marked - 2 limited - 1 weak - In black: the most dangerous slopes

### Snowpack stability

Typical situations: windy snow, persistent fragile sub-layer (trapped snowpack at altitude).

Spontaneous avalanches:

Rare bottom patches (crawling) in steep and grassy adrets, mainly below 2000 m. Avalanches of medium size possible at any time.

Accidental triggers:

A few friable patches in recent snow, in areas of accumulation by the wind which blew mainly from the south-west. A fortiori in steep ubacs, close to irregularities in the ground.

Above 2200/2300 m, presence of fragile sub-layers buried in the western, northern and eastern slopes. On these slopes, one cannot exclude breaking a plate over a great width.

### Fresh snow at 1800 m

### Weather preview

Tuesday 05 January

night

morning

afternoon

### Rain snow

| ISO 0 ° C   | 1000 m      | 800 m       | 900 m       |
|-------------|-------------|-------------|-------------|
| Wind 2000 m | ↗ 10 km / h | ↓ 10 km / h | ↓ 10 km / h |
| Wind 2500 m | ↗ 20 km / h | ↙ 10 km / h | ↙ 20 km / h |

### Off-piste snow depth

### Snow quality

You can put on around 1000/1200 m. Watch out for pebbles under recent snow.

Quality: recent cold snow, rather light. Dense snow below 1800/2000 m. Snow worked by the wind near the ridges (ledges or peeled and icy ridges).

### Subsequent risk trend
